

# **KOSOVO POPULATION PROJECTION 2017 – 2061**

Prishtina, December 2017

## **Introduction**

This is the second report on Kosovo Population Projection within a five (5) year period, at the same time it is a practice and international standard, which aims to update demographic data, respectively demographic projections.

This second report (preliminary report was based on 2011) is the result of significant demographic changes that have occurred during these years compared to those that have been projected.

The rapid fall of fertility rate, increase of mortality rate and large population movements with focus on emigration in these last six (6) years have affected the structure of resident population in Kosovo both, both in population age and in gender aspect.

The report in question is based on the latest demographic data updates that have been prepared by the Population Statistics Division at the Kosovo Agency of Statistics in cooperation with relevant field experts supported by UNFPA.

The report presents Kosovo population projections for a starting 44-year period from 2017 to 2061 by age and gender.

The report is important because it is an orientation for population trends until 2061 that will be offered to the general public. The report will enable demographers, statisticians, researchers, analysts, etc. to make time analyses and its components for the coming years with the hypotheses mentioned for fertility, mortality and migration developments will be important to analyse demographic trends in the country.

The importance of this report is firstly for policy makers as well as for different researchers. These data will also help in the preparation of plans, strategies, public services such as education, health, transport etc. and various analyses and research, academic institutions, individuals and other authorities during their analyses for housing, education, health, various services, transportation, etc.

Updating the latest demographic data was the basis for compiling the data, thus expressing encouragement for the staff who prepared this report as a guide to users of demographic data during their work.

Chief Executive Officer of KAS,  
Isa Krasniqi

The report was prepared by the Division of Population Statistics (KAS) in cooperation with expert engaged by the UNFPA Office in Kosovo.

*The publication was prepared:*

Avni Kastrati - Director of Social/Population Statistics Department

Sanije Uka, Senior Officer for Population Statistics

Arijeta Sojeva, Senior Officer for Vital Statistics

Contributed:

Elvira Tahiri, Officer in Population Statistics

Vjollca Berisha, Officer in Vital Statistics

*Engaged expert:*

Nico Keilman, Professor at Oslo University (Norway), Economic Department.

Editor: Agim Gashi - Senior Officer

Design: Ahmet Cakolli, Design Officer

Translation: Skender Limani & Arbert Avdyli

## Abbreviations

- % - Percentage
- ‰ - Per thousand (promiles)
- 1-4 - Simple class of integers; e.g. from 1 to 5, excluding 5
- 0-4 - Group interval
- 85+ - Over eighty five years old
- <18 - Smaller (less than) than eighteen
- MKGVP - Method of group component with common features

## **Acknowledgements**

For compilation of this report the challenge was the harmonization of demographic data for the years 2011-2017 by age and gender. Staff from the Division of Population Statistics has managed to harmonize the data according to the recommendations and experts engaged in the project.

The report was prepared by the KAS staff in close cooperation with Mr. Nico Keilman, who has made a valuable contribution in drafting and finalization of this report.

We also thank Mrs. Visare Mujku - Nimani from UNFPA office in pristinë for the support provided during the implementation of this report.

We also thank the other professional staff engaged by the Kosovo Agency of Statistics (design, translation, communication and other sectors) as well as local and international institutions for their comments and evaluations made during the finalization of this report.

## Foreword

The report on Kosovo Population Projection 2017-2061 is the second report prepared by Kosovo Agency of Statistics within a period of five (5) years.

Implementation of this report was enabled based on harmonized demographic data for the years 2011-2017.

The projection covers the period 2017-2061, showing the dynamics of the population by gender and single age based on recent trends in demographic developments: fertility, mortality, immigration and emigration.

The Kosovo Agency of Statistics will update this report or future forecast in 2023, based on the next census of 2021.

The report presents three options of demographic trends for the stated period:

- 1. High Variant,**
- 2. Medium Variant, and**
- 3. Low Variant**

Data users are recommended to use the **medium variant** in various planning and analysis. At present, this Medium variant gives a projection of the growth and the composition by age and sex of the population of Kosovo, which is considered as realistic by the Kosovo Agency of Statistics. However, because of the inherent uncertainty in projecting the future, an additional high and a low variant have been computed. Projection users are recommended to check how sensitive their general conclusions are when results of these two variants are used rather than those of the Medium variant. This is useful for long-range planning in particular. In the short run, projection results do not differ very strongly between projection variants.

## **About the data harmonization**

The main data bases used in this report were: Number of population by age and gender over the years, fertility, mortality (by age and gender), and number of immigrants as well as emigrants by single age and gender.

Harmonization of demographic data at the same time represents a very important base of the statistical infrastructure itself, as these data enable, extraction of proportional samples for each survey, which takes into account households as basic units, extraction of indicators, specific statistical indices, report / ratio between them, as well as the measurement of socio-economic trends. Harmonization of demographic data was made possible by the dedicated work of the staff engaged in this project and the provision of migration data from some countries.

## **Kosovo Population Projection**

### **Trends, assumptions and components of change**

#### **1. The method of cohort component and the data requirements**

Population projections are essential tools for policy formulation and planning in a number of areas, including education, social security, health, housing and the labor market.

After the Kosovo Assembly declared independence in 2008, the Kosovo Agency of Statistics (KAS) conducted the first Population and Housing Census on 1 April 2011. The data from this Census, together with other information, were used in the first report while harmonization of data for 2011-2017 enabled the compilation of this second population projection.

The so-called cohort component method for population projections (CCM) is a standard methodology applied by statistical agencies (National Research Council 2000 - Division of United Nations Statistics).

The method starts with the most recent known table in which the population is divided by age and gender. This so-called initial population or starting population is updated at the next point in time based on the assumptions about:

- *Specific mortality rates for age and gender, as an alternative, a life table by gender.*
- *Fertility rates by age of mother*
- Net migration numbers, divided by age and gender.

Assumptions for all the indicators of these three components relate to the first time interval. After this, the CCM is applied repeatedly, updating the population in subsequent consecutive intervals, based on the assumptions for mortality, natality and migration rates for each interval.

Since the projection has to formulate the assumptions for future mortality, natality and migration, the historical data for the three types of demographic indicators mentioned above are of crucial importance. In addition, the data on the initial population must be of good quality.

During the year 2017, an evaluation was made of the quality and the availability for the three data components of the statistics (BDM<sup>1</sup>) as well as the data from the 2011 Census and the age and gender calculations.

The projection is made for the period from 1 January 2017 and extends until 31 December 2061.

For all three components, three different sets of assumptions have been formulated, denoted by High, Medium and Low. According to the construction, the differences between the results of the High and Low variants will increase over time, reflecting the fact that it is difficult to give an accurate projection for more than the next 10 years.

**The Medium variant will reflect the future demographic trends that KAS considers as likely tends, based on the current data that were provided and the information on the situation and the demographic trends in the country.**

The High and Low variants provide the future demographic trends which are possible but which are less likely than the Medium variant.

---

<sup>1</sup>L-Births, V-Deaths and M-Migration

## 2. Population divided by age and the five-year age group

The projected population in this report is attributed to the resident population or population residing in Kosovo.

For immigrants this means an intended or actual stay of at least 12 months.

Similarly, individuals who have left Kosovo with the intention of staying abroad for at least 12 months are no longer included in the population of Kosovo.

This definition of the permanent residence is in line with the definition recommended by Eurostat and in accordance with the methodology used in the 2011 Census, as well as with the methodology which will be used in the 2021 Census.

The large generation born in 2000, moves up in the pyramid over time. It will remain visible in the age structure for many years in the future. Also the age groups of the population between 20 and 30 are significantly reduced between 2011 and 2017. This is due to the large emigration flows in 2015 and 2016 in particular. In this report KAS has used as the starting point the pyramid from January 1st 2017.

The following are provided the population pyramids on January 1st, 2011 and January 1st, 2017, for population estimation by age and gender.

Figure 1. Population pyramid, January 1<sup>st</sup>, 2011

Figure 2. Population pyramid, January 1st, 2017

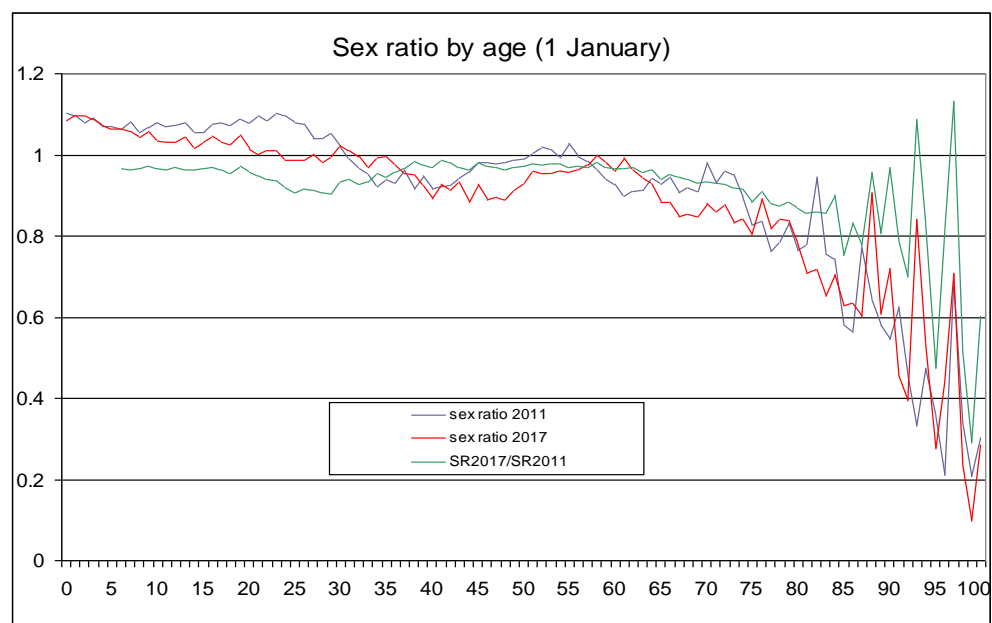

### 3. Gender ratio

Until the age of 30, there are more men than women at any age. This is caused by the high gender ratio at birth, which has been around 1.1 for at least several decades. At ages 20-30, the 2017 ratios are much lower than those of 2011, due to large emigration flows in 2015 and 2016. See Figure 3.

The age and sex structure of the population and the gender ratio were derived based on four sources:(i) the vital data after 2011 Census;(ii) for immigration data from the Ministry of Internal Affairs; (iii) for emigration data that KAS has received from four (4) main destination countries for Kosovars (Germany, Italy, Sweden and Switzerland); and (iv) Eurostat data.

The migration data showed that the gender ratio of emigrants in the period 2011-2016 was 65% male and 35% female. Based on the data harmonized by KAS, the gender ratio in Kosovo has changed, being dominated by women (from 2014 onwards). Also, another factor that could have an impact on the female gender ratio over the years is the under-reporting of the female deaths (see more on mortality).

Figure 3. Resident population, gender ratio 2011 and 2017 and its change over the period 2011-2017

#### 4. Fertility

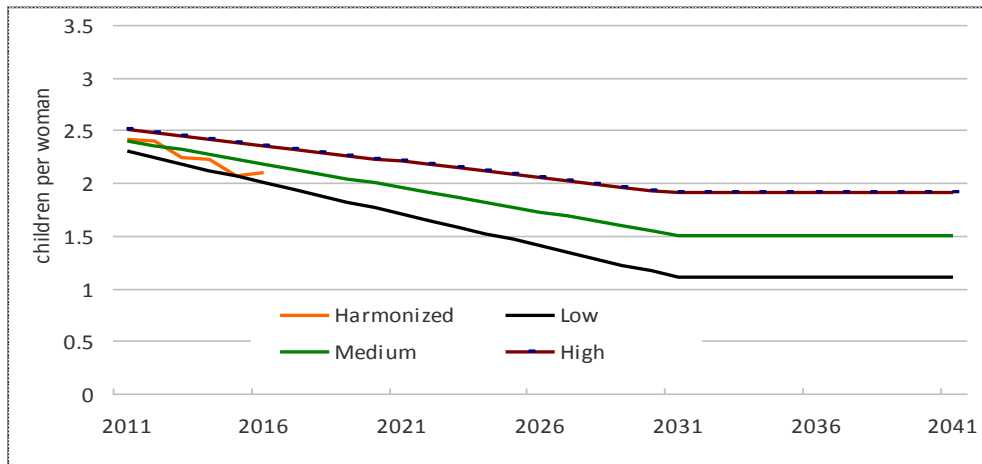

Predicted values of the Total Fertility Rate (TFR) in the medium variant will start from the 2011 average of about 2.4 children per woman and then followed by linear decrease towards of 1.5 children per woman in 2031. The TFR will remain at that level during the period 2031-2061. The TFR values in the High Variant and Low Variant will fall linearly, but at a higher and lower level. They will stabilize at 1.9 and 1.1 children per woman (from 2031 onwards in both cases). The fertility age distribution will be the average distribution of the years 2010-2016, and will be kept constant over the period of 2011-2061. The gender ratio at birth (GRB) is assumed to be 110.5 boys per 100 girls throughout the period of 2011-2061.

**Table 1. Number of births throughout the years and Total Fertility Rate (TFR)**

Year	2011	2012	2013	2014	2015	2016
Births	34,569	34,643	32,528	32,067	29,290	29,428
TFR	2.41	2.40	2.25	2.23	2.07	2.10

The fertility rate for low and high levels was obtained at 2.3 and 2.5 respectively, in order to reflect uncertainty in harmonized data. From the beginning of 2017, the revised projections will start from the values of the TFR in 2017 of 1.94, 2.13 and 2.32 children per woman in low, medium and high variation.

Figure 4. Total Fertility Rate

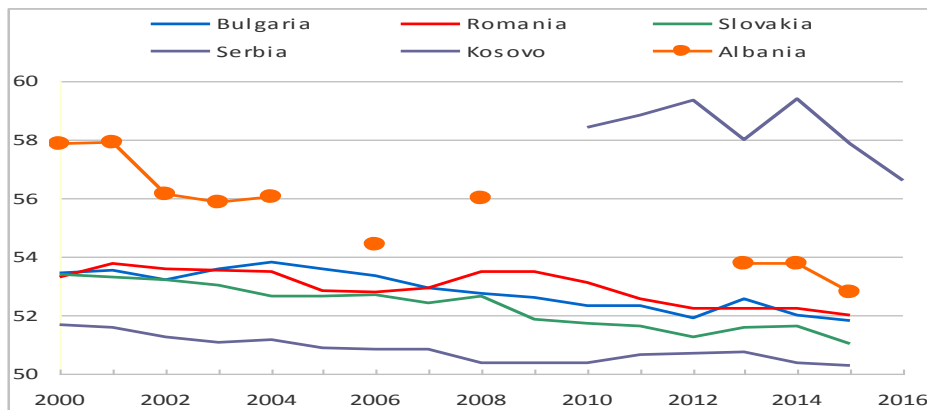

## 5. Mortality

Not all deaths among the resident population in Kosovo are recorded. This conclusion was based on vital data showing a recorded proportion of male deaths rate of 58 percent (compared with all deaths). This is an extremely high percentage; see Figure 5. It is much higher than the rest in the region. If we think that 58% is not correct, a possible explanation for this high proportion is that there is under-record of deaths among women compared to men's death.

After discussions and analysis we decided that 58% of all deaths that were male are very high, but that, the ratio in reality is 54%. This is similar to the part of Albania for the current years; see Figure 5. These data show that the percentage of male deaths is much higher in Kosovo than in other countries in the region.

Figure 5. Male's deaths in percentage in some countries and in Kosovo

Source: Eurostat

Generally, assume that the share male deaths (as a proportion of all males and females deaths) is  $\alpha$ , according to the recording or registration of death ( $0 \leq \alpha \leq 1$ ). The further supposition is that the real number of male deaths, compared to all deaths, is  $\beta$  ( $0 \leq \beta \leq 1$ ).

The two shares are different because the recording of death is not perfect. Assume that only a part  $m$  of all male deaths are recorded, and also  $f$  for the part of female deaths ( $0 \leq m, f \leq 1$ ). When the recording is complete,  $m = f = 1$ . Then it is easy to show that:

$$f = \frac{\beta}{1 - \beta} \cdot \frac{1 - \alpha}{\alpha} \cdot m$$

Moreover, the share of all deaths (male and female) being recorded is equal to

$$\left(\frac{\beta}{\alpha}\right)m$$

Therefore, with  $\alpha$  and  $\beta$  equal to 0.58 and 0.54, respectively, and assuming that 95% of male deaths are registered, female deaths registration is estimated to be around 81%, and total deaths by 88% (including non-reporting of deaths from non-Albanian communities).

Based on the harmonized data for the years 2011-2016 (including all communities), the life table for 2011 was calculated. Taking age-specific death rates 2011 based on the harmonized data at face value, the resulting life expectancies are 74.0 years for men and 79.4 years for women. A sex gap in life expectancy of 5.4 years is large, but not unrealistic. Compare Table 2, which gives the life expectancy of men and women in a few countries in the region in recent years.

**Table 2. Life expectancy in some countries in the region and the gender gap, 2014-2015**

Year	2014			2015		
	Male	Female	Gender gap	Male	Female	Gender gap
Bulgaria	71.1	78.0	6.9	71.2	78.2	7.0
Croatia	74.7	81.0	6.3	74.4	80.5	6.1
Romania	71.4	78.7	7.3	71.5	78.7	7.2
Slovakia	73.3	80.5	7.2	73.1	80.2	7.1
<i>Albania</i>	76.3	80.2	3.9	76.2	79.7	3.5
Serbia	72.8	78.0	5.2	72.8	77.9	5.1

Source: Eurostat

How does the expectation of life expectancy estimated for Kosovo change in 2011 when we assume a certain degree of under-registration of the deaths of males and, in particular, of females? Table 3 gives the results of the above expression, and the corresponding female life expectancy, assuming different

values for the true share of male deaths ( $\beta$ ). As before, the average value of  $\alpha$  (the percentage of recorded deaths of male as a percentage of all deaths recorded) during 2011-2016 is 0.58, while the share of registered male deaths ( $m$ ) is assumed to be 0.95.

With these assumptions, it is easy to show that 81% of all female deaths are recorded and 88% of all deaths, as noted above.

Table 3 also shows the gaps in life expectancy and the full rate of death in females and all deaths when we do not assume 54% of the death rate of males compared to all deaths but for different values (ranging from 51 to 58%).

Another important assumption is that the under-recording varies by gender, but not by age. Then, the life expectancy of male turns out to be 73.4 years and female 77, with these assumptions (2011).

**Table 3. Reported deaths, life expectancy and gender gap**

True share of male deaths	Coverage of female's deaths	Coverage of all deaths	Life expectancy of female	Gender gap
0.51	0.716	0.835	75.7	2.3
0.52	0.745	0.852	76.1	2.7
0.53	0.776	0.868	76.6	3.2
<b>0.54</b>	<b>0.808</b>	<b>0.884</b>	<b>77.0</b>	<b>3.6</b>
0.55	0.841	0.901	77.5	4.1
0.56	0.876	0.917	77.9	4.5
0.57	0.912	0.934	78.4	5.0
0.58	0.950	0.950	78.8	5.4

Source: Eurostat

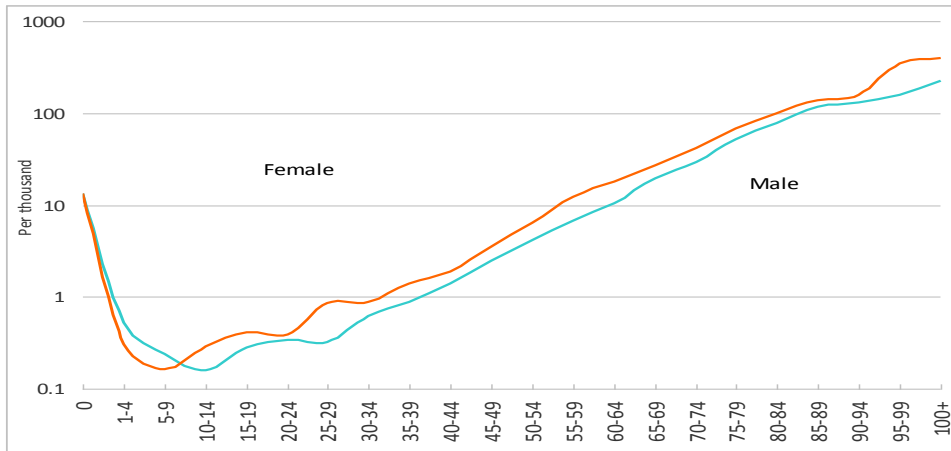

With this assumption, and two further assumptions, namely (i) male deaths are under-recorded by 5% and (ii) the under-recording is the same for each age group (but much higher for females than for males) the life expectancy gap is 3.6 years. This is similar to the situation in Albania (see Table 2).

In addition, the assumed share of male deaths (54 percent) is close to the number of Albania (53.8 and 52.8 percent in 2014 and 2015 - see Figure 5 above).

Figure 6 shows age specific death rates that are used as data for calculations of life tables.

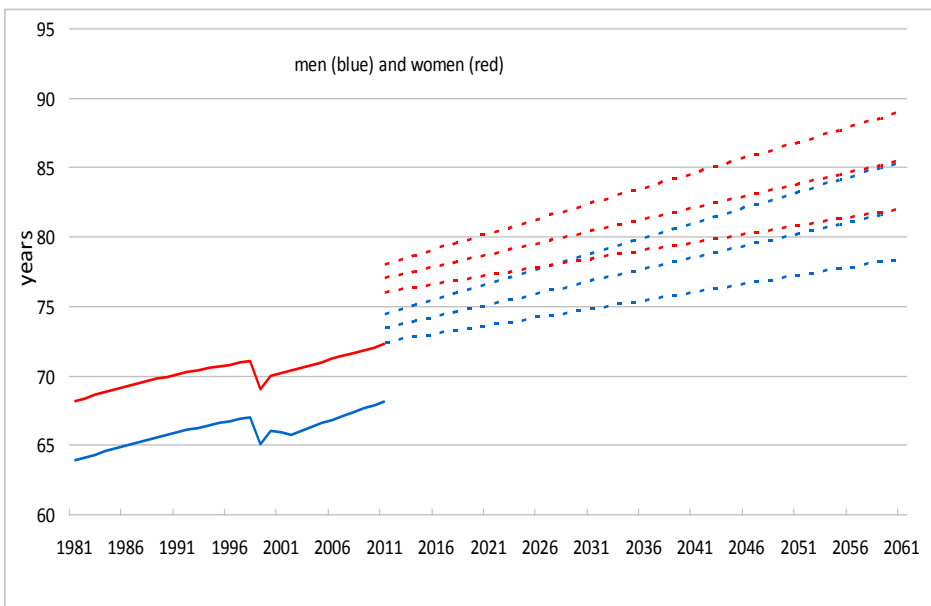

Figure 6. Age specific death rates 2011

Life expectancy values of 73.4 and 77.0 years of age for male and female in 2011 will serve as the starting point for future life expectancy expectations in the Medium variant. The values will increase linearly by 0.17 years per calendar year. In 2061, they will reach the values of 81.9 and 85.5 years, respectively. The age pattern of mortality is the average pattern of 2010-2016, as before.

Figure 7 gives the assumed life expectancy values where the projections will start from the life expectancy values in 2017, equal to 73.1, 74.4 and 75.7 years for males for the low, medium and high variants. For females, the values of 2017 are 76.7, 78.0 and 79.3 for the low, medium and high variants.

Figure 7. Life expectancy at birth 2011-2061

## 6. International migration

Harmonized and up-to-date migration data for net migration are presented below.

Table 4. Net migration estimated over the years according to KAS harmonization of data Year	2011	2012	2013	2014	2015	2016
Harmonization	-6 076	-5 725	-16 382	-39 609	-55 572	-8 940

During the discussions and estimations made by KAS due to the impact of the large migration in 2014 and 2015, the latest net migration numbers given in Table 5 were taken as a basis for population projections 2017-2061 for all three variants.

**Table 5. The basic net migration numbers received as representative values in the report**

Types of variants	Low variant	Medium variant	High variant
Net migration	-20 000	-10 000	5 000

These numbers are kept constant for the entire period of 2017-2061.

Regarding the gender distribution of net migration, new data show that 62.7 percent of net migration includes males, while 37.3 percent includes females. In the forecast of 2013, data from 2008-2010 showed that males and females accounted for 40.7 and 59.3 percent.

While, the gender distribution of net migration was in favour of females in previous data, it shows an over-representation of males in the latest data. The over-estimation of females in previous data is mainly explained by year 2010, with a slight positive balance in net migration of males (+129) but a negative balance for females (-2756). The other two years showed negative migration balances for males and females.

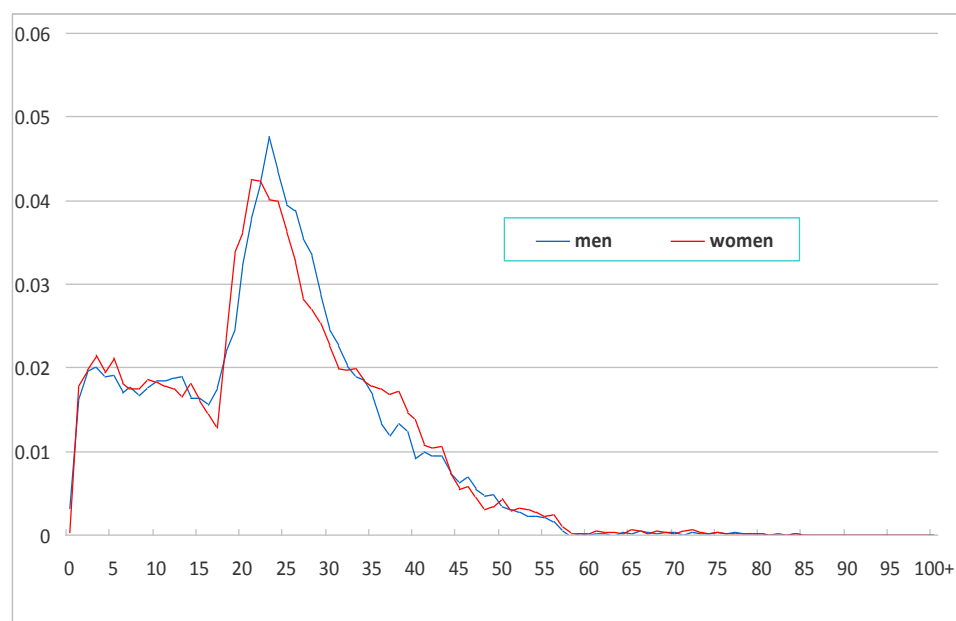

If we ignore the year of 2010 and calculate gender distribution based on data for 2008 and 2009, the gender distribution would be 48.1 percent for males and 51.9 percent for females.

The gender distribution of migration in this report as a starting point has been modified to 55 percent for males and 45 percent for females because the emigration in years 2014 and 2015 were the years of major turbulence of emigration dominated by males.

Age-specific migration is high in the first years of life, decreases steadily until the early adult ages when it increases rapidly reaching a peak in the twenties, thereafter declining with an occasional secondary peak at retirement ages.

An age pattern of this kind was used in the previous projections. However, new data show that the age pattern is different for both genders. Figure 8 shows net migration according to age group and gender.

Figure 8. Age distribution of net migration 2011-2016 (%)

The values for young children are completely absent in these estimates. The reason is that most of the period was characterized by turbulent emigration flows, especially during the years 2014-2015. Many of the immigrants were young people. Crossing international borders in such turbulent periods is not appealing to families with young children.

As the way of emigration changes in the future as well as the age structure of the population may differ, the age model of net migration in the period 2011-2016 is not representative for the entire projection period 2017-2061.

Therefore, the age distribution has been modified proportionally by using data from 2008-2009.

The result given in Figure 9 includes the period 2011-2061. In the medium variant, the net migration assumed in 2017 and beyond will be negative (migration greater than immigration), while positive migration on the Figure represents the ages of previous (labor) migrants returning to Kosovo.

Figure 9. Age distribution of net migration 2011-2061 (%)

### Data divided by large groups

Population according to age divided into 10-year periods according to three variants.

**NOTE:** The annual values in all the tables represent below are at the beginning of the respective year (01 January).

**Table 6. Kosovo population according to age group and year (medium variant)**

Year	Population by age group				Population by age in %			
	Total	0-14	15-64	65+	Total	0-14	15-64	65+
2017	1,783,531	446,633	1,192,181	144,718	100	25	67	8
2021	1,809,458	431,526	1,211,592	166,341	100	24	67	9
2031	1,818,674	364,294	1,217,592	236,787	100	20	67	13
2041	1,759,492	290,436	1,150,779	318,277	100	17	65	18
2051	1,652,090	247,855	1,034,147	370,088	100	15	63	22
2061	1,492,192	199,518	892,803	399,871	100	13	60	27

**Table 7. Kosovo population according to age group and year (low variant)**

Year	Population by age group				Population by age in %			
	Total	0-14	15-64	65+	Total	0-14	15-64	65+
2017	1,783,531	446,633	1,192,181	144,718	100	25	67	8
2021	1,750,206	412,028	1,172,614	165,565	100	24	67	9
2031	1,581,731	276,605	1,071,662	233,465	100	17	68	15
2041	1,333,861	176,790	853,614	303,457	100	13	64	23
2051	1,033,647	120,692	596,222	316,734	100	12	58	31
2061	688,847	58,041	349,086	281,721	100	8	51	41

**Table 8. Kosovo population according to age group and year (high variant)**

Year	Population by age group				Population by age in%			
	Total	0-14	15-64	65+	Total	0-14	15-64	65+
2017	1,783,531	446,633	1,192,181	144,718	100	25	67	8
2021	1,888,375	455,519	1,268,857	163,999	100	24	67	9
2031	2,140,369	477,154	1,431,905	231,309	100	22	67	11
2041	2,348,968	449,273	1,575,949	323,745	100	19	67	14
2051	2,537,973	445,043	1,660,040	432,891	100	18	65	17

**Agjencia e statistikave të Kosovës përshkrim i shkurtër**

Agjencia e Statistikave të Kosovës (ASK) është institucion profesional, që merret me grumbullimin, përpunimin dhe publikimin e të dhënave zyrtare të statistikave. Si e tillë, vepron që nga viti 1948. ASK ka kaluar nëpër disa faza historike, e strukturuar sipas rregullimit shtetëror të asaj kohe. Më 2 gusht 1999, ASK-ja ka rifilluar punën e vet profesionale (pas 9 vjetësh ndërprerjeje të të gjitha serive statistikore në dëm të interesit të Kosovës), si institucion i pavarur në kuadër të Ministrisë së Administratës Publike. Që nga data 12.12.2011 ky institucion vepron në kuadër të Zyres së Kryeministrit të Kosovës. ASK-ja financohet nga Buxheti i Konsoliduar i Kosovës, por edhe nga donatorët për projekte të veçanta dhe për ndihmë teknike profesionale. Agjencia e Statistikave të Kosovës vepron sipas Ligjit Nr. 04/L-036, i cili ka hyrë në fuqi më 12.12.2011.

Programi i Statistikave Zyrtare, 2013-2017 është zbatuar për zhvillimin e Sistemit Statistikor të Kosovës në korrelacion me Statistikat e Bashkimit Evropian (Eurostat). ASK-ja ka strukturë organizative të tri departamenteve prodhuese dhe katër departamente mbështetëse. Departamentet prodhuese janë: Departamenti i Statistikave Ekonomike dhe Llogarive Kombëtare, Departamenti i Statistikave të Bujqësisë dhe Mjedisit, dhe Departamenti i Statistikave Sociale. Kurse, departamentet mbështetëse: Departamenti i Metodologjisë dhe Teknologjisë Informatike; Departamenti për Politika, Planifikim, Koordinim dhe Komunikim; Departamenti i Regjistrimit dhe Anketimit; si dhe Departamenti i Administratës. Në kuadër të ASK-së veprojnë edhe Zyrat Rajonale: Gjakovë, Gjilan, Mitrovicë, Pejë, Prizren, Prishtinë, dhe Ferizaj.

Numri i të punësuarve dhe buxheti ende janë të limituara. Të punësuar janë gjithsej 143 punëtorë, prej tyre, 98 (68,5%) në ASK, gjersa në Zyrat Rajonale, 45 (31,5%). ASK ka këtë strukturë kualifikuese: 61,7% me shkollim universitar; 15,4 me shkollim të lartë; ndërsa 17,5% me shkollim të mesëm. Kemi bashkëpunim profesional dhe teknik me të gjitha ministritë e Qeverisë së Kosovës, sidomos me Ministrinë e Ekonomisë dhe Financave, Bankën Qendrore të Kosovës, me institucionet ndërkombëtare, EUROSTAT-in, Fondin Monetar Ndërkombëtare, Bankën Botërore, SIDA e Suedisë, DFID, UNFPA, UNDP, UNICEF dhe me statistikave të shteteve në rajon. Agjencia e Statistikave të Kosovës mbulon gati krejtësisht territorin e Republikës së Kosovës, duke u organizuar në strukturimin e qarqeve statistikore dhe njëjive raportuese si njësi bazë dhe të vetme në shkallë vendi, nga të cilat merr informatat e dorës së parë. Te gjitha anketat e zhvilluara në terren përdorin shtrirjen e mostrës në këto qarqe statistikore, por edhe metodologjinë sipas rekomandimeve ndërkombëtare. Gjatë grumbullimit të të dhënave statistikore dhe raporteve nga njësitë raportuese angazhohen profesionistë, teknikë, administratorë, civilë të zyrave të vendit, regjistruer terreni nga Zyrat Rajonale etj. Në vitin 2011 është realizuar me sukses projekti i Regjistrimit të Popullsisë, Ekonomive Familjar dhe Banesave, ndërsa në vitin 2014 është realizuar po ashtu me sukses Regjistrimi i Bujqësisë 2014. Misioni i ASK-së përmbush nevojat e shfrytëzuesve me të dhëna statistikore kualitative, objektive, në kohë dhe hapësirë në mënyrë që shfrytëzuesit të kenë bazë të besueshme, që të bëjnë analiza të rregullta në interes të planifikimit dhe zhvillimit gjatë hartimit të projekteve në shkallë vendbanimi, komune dhe vendi. Të përkrah institucionet qeveritare, institutet, shkencën, akademinë, bizneset, si dhe hulumtuesit e pavarur. Në mënyrë që t'u sigurojë informata të duhura për vendimmarrësit dhe përdoruesit e tjerë në Kosovë.
