KOSOVO AGENCY OF STATISTICS

PREFACE

Kosovo Agency of Statistics (KAS) based on the work plan for 2021, has prepared for publication the Statistical Yearbook of the Republic of Kosovo 2021.

The Statistical Yearbook of the Republic of Kosovo 2021 is a special and important publication for the Kosovo Agency of Statistics.

This Yearbook summarizes many important statistical data given in different time series related to Kosovo.

This publication contains aggregated statistical data, methodological records, graphics, maps and analyses on current situation in specific areas of economic, social and agricultural activities in the Republic of Kosovo.

In this publication the users of official statistics will have the possibility to find in a faster manner the basic facts on Kosovo, as well as aggregated and comparative data on population, geography, education, culture, social conditions, health, justice, labour market and wages, income and consumption, agriculture, forestry, fishing, energy, hotels, industry, construction, housing, businesses, exchange of goods and services, transport and communication, trade, national accounts, balance of payments, prices, public finances, financial markets, environment, some comparable data with the region and wider, etc.

KAS thanks all the institutions that cooperated and contributed to this important publication. We thank local and international institutions, various local and international organizations, businesses, households and all individuals who helped to collect and process statistical data. In particular, we thank KAS staff for contributing to the finalization of this publication..

Your comments, remarks and suggestions regarding the publication of the Statistical Yearbook 2021 are welcome and they can be sent to the email address: infoask@rks-gov.net

Acting Chief Executive Officer OF Kosovo Agency of Statistics

Mr. Ilir.T.Berisha

INTRODUCTION

Statistical Yearbook is one of the most special and most important publications for the Kosovo Agency of Statistics.

This Yearbook presents statistical data starting from the basic facts on the Republic of Kosovo, continuing with other very important data such as geographic information about Republic of Kosovo, data from the Population and Housing Census conducted in the Republic of Kosovo in 2011, Results of the Census of Agriculture in 2014, which provide an overview of the agricultural activity in Kosovo for 2014.

The birth data contain information about life events that have occurred at the national and municipal level, according to their main characteristics, such as age, gender, ethnicity, education, fertility.

Marriage data are presented by years and marital status, and also by years and average age of spouses, by municipality and by age groups of men and women.

Divorce data are presented by municipality and age groups, i.e., age group of men and women, by duration of the marriage, by years, by number of children supported by divorced parents.

Data on deaths are presented by months and years, gender, age group and types of death.

Education data present number of children, pupils and students in public and private education institutions.

Culture statistics provide data on cultural activities of cinemas, theatres, galleries, museums, libraries as well as data on the number of people employed in these institutions.

Sport statistics contain statistical data related to sport activities and to the number of sportspeople as well as number of people employed in this sector.

Statistical Yearbook also includes data on social welfare, number of families and family members that benefit from social assistance.

Health statistics provide data on the number of workers in health institutions by gender, age, qualification and nationality.

Regarding statistical data on the legal system, data are related to juveniles and adult persons convicted by gender, suicides by gender and age group, by years.

Labour market provides population data by age group, education and employment status, poverty rate and activity rate.

Living standard provides data on consumption expenditure, self-consumption, family income, and basic social and economic conditions in which families live in.

Agricultural statistics analyses data on the situation of agriculture in the Republic of Kosovo, land use, animal and plant production. Data on agro-monetary statistics analyses the annual price index for agricultural products, average annual prices for some agricultural products, annual price index for agricultural inputs and data on economic accounts for agriculture with actual prices.

This yearbook contains data from the Census of Agriculture 2014.

Energy data include production and consumption of coal, generation of energy in power plants and hydro plants, import and export of electricity.

Hotel data presented in the Statistical Yearbook present statistical information regarding the hotel and tourism activities in the Republic of Kosovo.

Structural Business Statistics provide data on the structure of economic activities in the Republic of Kosovo.

Data on new registered businesses are listed by year, economic sections, municipalities, categorization according to the number of employees and by legal form of organization.

The yearbook also contains data on construction and housing, which were referred to data from the Population and Housing Census 2011.

Transport and Telecommunications statistics include a wide system of information on transport of passengers and freight, road and railway infrastructure lines and means for transportation at national and regional level.

This includes data on households that own a landline telephone, mobile or both, households owning computers and households that have Internet access. These data were referred to Census of Population and Housing 2011.

Kosovo International statistics include data on movement of goods in international trade, export and import by sections of SITC, export and import by country, the structure of import by country as well as information on the key partners of the Republic of Kosovo.

National Accounts present a comprehensive and inclusive overview of all transactions that have occurred within a certain period of time, thus presenting a general overview of Kosovo's economy. Data on Gross Domestic Product (GDP) are the most important economic indicator in the National Account System that presents the economic performance of a country over a certain period of time. This Statistical Yearbook presents data on Gross Domestic Product in the Republic of Kosovo, which are compiled by two approaches: by expenditure and by production approach.

Other important data included in the Statistical Yearbook are those concerning Consumption Price Index (CPI), Import Price Index (MPI) and Production Price Index (PPI). This Yearbook also contains data on municipal and industrial waste in Kosovo.

This Yearbook represents one of the most serious efforts of the team of our institution and associates to inform the broader public.

The publication is available in Serbian and English language as well as in electronic form, thus facilitating the use of statistical data.

THE IMPACT OF THE COVID-19 PANDEMIC ON THE STATISTICAL YEARBOOK DATA

The Statistical Yearbook contains mainly annual data. The impact of the Pandemic COVID-19 has also affected statistical activity such as the collection of annual data which should have been included in the Statistical Yearbook of the Republic of Kosovo 2021.

Below is explained the reason why some new indicators were published in the time frame according to the KAS Publication Calendar where it also affected the lack of publication of Annual data in the Statistical Yearbook 2021.

Kosovo Agency of Statistics (KAS) estimates that the number of forms collected does not represent / cover all cases of births and deaths occurred and registered in Kosovo. This is especially pronounced in the months when COVID-19 infection and mortality rates were highest, where many forms / statistical sheets were not reported to KAS. Therefore, the data published in the Statistical Yearbook are preliminary and the source of data is the Kosovo Civil Registry Agency until the final report will be published in the coming months until the verification / completion of all data in detail.

Due to the COVID-19 Pandemic, the Results of the 2020 Labor Force Survey have not been published as scheduled. The reason for not publishing these data is that KAS has not been able to continue collecting data in the field after March 16, 2020 to complete timely data collection for the first quarter 2020.

Jurisprudence statistics for juveniles 2020 were not published according to the planned date in the KAS Publication Calendar as the Kosovo Judicial Council (KJC) respectively the Department of Statistics at the KJC as a source of data failed to send them in KAS as they are still in the process of finalizing the advanced statistics module within the implementation of the Case Management Information System (CMIS).

According to the Statistics Office, the delay in the implementation of the Case Management Information System (CMIS) has been also affected by the COVID-19 Pandemic.

The impact of the COVID-19 Pandemic on statistical activities and the large volume of work, has made the Results of the Agricultural Economics Survey 2020 not published according to the planned date in the publication calendar. As the Statistical Yearbook contains mainly Annual data, AEB 2020 data will be published during July.

You can find all these data after their publication on the KAS website. ask.rks-gov.net

ACRONYMS

KAS	-	Kosovo Agency of Statistics
AAR	-	Annualized Agreed Rates
HBS	-	Household Budget Survey
AHS	-	Agricultural Households Survey

Total General Government expenditure in 2017 was € 1.836,2 million.
Total General Government expenditure in 2018 was € 1.978,0 million.
Total General Government expenditure in 2019 was € 2.151,6 million.
Total General Government expenditure in 2020 was € 2.332,2 million.

CHAPTER 1. GEOGRAPHIC INFORMATION ON KOSOVO

Republic of Kosovo has an area of 10.905 km²¹. It is situated in South-Eastern Europe bordering Albania to the southwest, Montenegro to northwest, Serbia to northeast and Macedonia to the south.

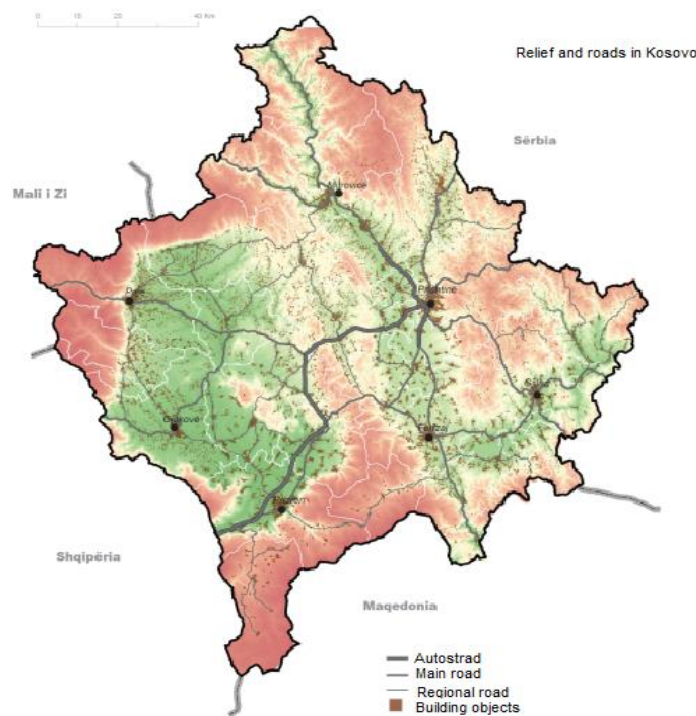

The territory lies in geographic longitudes 41° 51' and 43° 16' and the latitudes 19° 59' and 21° 47'.

The territory of Republic of Kosovo is characterized with various altitudes. The lowest point of Kosovo is in the valley of river Drini i Bardhë, in the border with Albania which is only 270 m above the sea level, and the highest point is in the west of Kosovo, Gjeravica with an altitude of 2.565 m.

In the hydrological aspect, Kosovo is divided into river basins of Drini i Bardhë, Ibri, Morava e Binçës and Lepenci. The rivers of Kosovo flow into three seas: Black Sea, Adriatic and Aegean Sea.

The climate of the Republic of Kosovo in most part is continental, resulting in hot summers and cold winters, with Mediterranean and continental influence (average temperature in the country ranges between + 30 °C in summer and -10 °C in winter). However, due to uneven elevations in some parts of the country, there are variations in temperatures and distribution of precipitations.

Relief map of Kosovo

¹ Data on the area of the Republic of Kosovo are obtained from the Kosovo Cadastral Agency (April 2017)

TAB 1.1: LENGTH OF KOSOVO'S BORDERS WITH NEIGHBORING COUNTRIES

Neighboring country	Length in km
Albania	116.3
Macedonia	167.6
Montenegro	78.0
Serbia	381.6
	743.5

Border line between Kosovo and neighboring countries is 743,5 km.

¹⁾ The change in values for Tmax and Tmin in 2015 is because these data published in the Statistical Yearbook of 2016 have been data showing the average values of Tmin and Tmax extreme, while the data presented from 2003 -2014 and 2016 represent the absolute values of Tmax and Tmin. In the table given for 2015, data are updated and harmonized with data from the previous years.

¹⁾ Data presented for 2015 are not complete data, they belong to the period June - December 2015..

CHAPTER 2. POPULATION STATISTICS

Kosovo state structure is characterized by a very young population, where the average age is 30.2 years.

In the period after 1990, Kosovo struggled with the issue of migration which had an impact both in population structure and in its growing rate. Free and uncontrolled movement of population changed the ratio between urban and rural population. According to population census that was conducted in April 2011, 61% of the population lives in rural areas.

The population and household data for the years stated in the tables are taken from respective population censuses for those years.

Number of inhabitants in the period 1947-2011 is calculated based on the results of population census, data on natural increase and the available data on the migration of population.

According to the estimation of Kosovo Agency of Statistics, the average life expectancy for 2011 in Kosovo for both genders was 76.7 years. Women had a longer life expectancy of 79.4 years, whereas men 74.1 years.

In order to analyse the demographic situation of a country, the main resource is the data generated from population census (which according to the United Nations rules is conducted every ten years) and from the vital statistics.

Such information is then followed by the other part of population data and main demographic indicators such as birth rate, mortality rate and migrations. These are the three main indicators used to measure population changes in a country.

Population grows or declines depending on the positive or negative natural increase and also on positive or negative migration rate.

This is presented with the following formula:

$$P1 = P0 + (L - V) + (I - E)$$

P1	-	population estimation at the end of the year,
P0	-	average population in the middle of the year,
L	-	number of live births in the calendar year,
V	-	number of deaths in the calendar year,
I	-	number of immigrations in the calendar year,
E	-	number of emigrations in the calendar year.

Based on these indicators, the population number of a country can be calculated, evaluated and projected more accurately, if the number of live births, number of deaths and migration rates are accurate.

Definitions:

The population pyramid presents the population structure by the year of census, age and sex. Until the last census of 2011, results were presented based on the concept of residential and non-residential population, while the census of 2011 did not include the population living outside Kosovo for more than 12 months. Therefore, due to such methodological change, there is a disproportion in the total number of population compared to previous years.

Population projections present the estimation of future changes in the total number of people, as they are assumptions related future trends of birth-rate, mortality and migration coefficients.

Data source:

The results of Population and Housing Census and data from the civil status offices.

POPULATION CENSUS 2011

In April 2011 Kosovo conducted the population census which was in accordance with the period that was planned for the round of population censuses in 2010 set by the United Nations. Census was in accordance with the international criteria and standards for censuses.

Population census in Kosovo was carried out in the traditional method (door to door), where enumerators have filled in the forms.

Census in Kosovo was monitored by the international community. The International Monitoring Operation (IMO) established in 2006 by the Council of Europe and the European Commission, monitored closely the census preparations in Kosovo. Its Steering Committee monitored all methodological aspects and in addition, it focused on information activities to ensure that all groups were given the equal opportunity to participate. IMO also organized an international observation for the enumeration phase. IMO played a key role in international recognition of census in Kosovo. In the end, the census process was assessed positively by both local and international institutions for meeting the local and international census criteria.

GENERAL CHARACTERISTICS

CHAPTER 3. VITAL STATISTICS

BIRTHS

Data description: Data contain information concerning life events that have occurred at the national and municipal level, by their main features such as age, sex, ethnicity, education, fertility.

Definitions:

Live birth – is a complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy, which after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta.

Born dead or foetal death – is death prior to the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, as indicated by the fact that after such expulsion or extraction the foetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscle.

Gross birth rate – is the ratio of number of live births in a year in the average population for that year, expressed in per mill (‰).

Vitality coefficient – is the ratio between the live births and deaths, total expressed in per mill (‰).

Coefficient of stillbirths – Foetal deaths in 1000 births, expressed in per mill (‰).

Masculinity coefficient – is the ratio between male live births compared to female live births, expressed in percentage (%).

The age of women giving birth – is the average age of women when their children are born.

Total fertility rate – is the average number of live children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age.

Total fertility rate – Total number of live births per woman aged 15 – 49.

Geographic comparativeness: Statistics for births refer to population at national and municipal level.

Data source: Civil registration office and hospitals. Data are collected through forms for collecting birth statistics.

MARRIAGES

Data description: Data on marriages are presented by year and marital status, by year and average age of married spouses, by municipalities and by the age group of men and women. Data are processed and published on annual basis.

Definitions:

Legal marital status – Marital status is the state of being legally married.

Geographic comparativeness: Statistics on deaths refer to population at national and municipal level.

Data source: Civil Status/Registration Office. Data are collected with individual questionnaires, which are processed and then issued as final data, by place of permanent residence and time when the event occurred.

DIVORCES

Data description: Data are presented by municipality and age groups, by the age group of married men and women, marriage duration, number of years and number of children supported by divorced parents. Results of divorce statistics are processed based on the principle of the last place of common residence of spouses. Data are processed and published annually.

Definitions:

Divorce – is the final legal dissolution of marriage between a man and woman, which gives parties the right to marry again, based on legal provisions.

Geographic comparativeness – Statistics on deaths refer to population at national and municipal level.

Data source: Data are collected from courts.

DEATHS

Data description: Data are presented by months and years, sex, age groups and type of death. These data are processed based on the principle of permanent residence, which corresponds with the concept of permanent (residential) population applied in population censuses.

Definitions:

Death – is the permanent disappearance of all evidence of life at any time after live birth has taken place (post natal cessation of vital functions without capability of resuscitation). This definition does not include foetal death.

Perinatal death – is death of a live born child within the first six days after birth (168 hours).

Neonatal death – death of a live born child which occurs after the first seven days (168) but before completing 28 days of life after birth).

Post neonatal mortality – is the death of a live born child that occurs after the first 27 days of life after birth (but prior to fulfilling 1 year of life after birth).

Infant mortality rate – is the number of deaths under one year of age occurring among the live births in a given year, per 1,000 live births!

Early mortality rate of the newborn – Presents number of deaths of children less than one week of age per 1,000 live births occurring in a given year.

Geographic comparativeness: Statistics on deaths refer to population at national and municipal level.

Data source: Civil Status/Registration Office.
Data are collected through the form on death statistics.

CAUSES OF DEATH

Description of data

Causes of death are processed and published in an analytical manner and with standard tabular form classified and recommended by the World Health Organization (WHO) and Eurostat.

Statistical data on causes of death are made based on the processing part called "Medical certificate of death", statistical questionnaire for deaths DEM-2.

Coding of diseases by International Classification of Diseases, third revision (ICD-10) is made by the medical staff of the National Institute of Public Health (NIPH).

Geographical comparability

The data are presented according to the classification of groups of diseases and participation of 100,000 inhabitants, gender and age groups in the country and municipality level. These data are processed under the principle of permanent residence, which corresponds to the concept of permanent population (resident) applied in censuses.

Source of data: Basic Registers of deaths based on civil status law no. 04 / L-003, and to achieve this research doctors in hospitals, clinics, etc. of the Centers of Family Medicine, and so on, diagnose description in the statistical questionnaire DEM-2 Question 23 - The cause of death from "history" of the persons treated in hospitals, while "cardboard" of persons treated in ambulances or other valid documents which obviously diagnosis of the deceased.

CHAPTER 4. EDUCATION STATISTICS

Data description: Number of children, pupils and students in public and private education by gender and years, number of schools, number of classes per grade, number of educators, number of teachers in public and private education by gender and years, number of pupils per 1000 inhabitants, number of students in 2000 inhabitants and public spending on education by years.

Definitions:

School – in education statistics, school presents a group of students/pupils, who acquire certain knowledge according to a plan, regardless of whether schools are dependent or independent. Each geographic unit (school facility) is considered a school unit.

Classes – are group of pupils who are taught by teachers in the same premises, during a school year and with certain curriculum. Parallels may be uncombined, and combined - where classes are attended by pupils of first grade, second, third, etc, due to the small number of pupils.

Grades – grade is the level of education in which students at a certain interval, not more than one school year, acquire certain knowledge based on the education curriculum of a certain school. Students of a grade can be distributed in one or more groups (classes), due to the large number of students, when more students are registered in a grade. Completed grade is the grade where student acquires the right to pass to a higher grade by passing the final examination, or by passing the matura examination.

Groups – groups in kindergartens and preschool institutions present groups of children established based on the age of children, where each preschool and pre-elementary divides the children according to their age, while a mixed group means groups of children of different (mixed) age groups, i.e., the children are not of the same age.

Student/pupil – a pupil is the person enrolled at a school for attending classes at that respective school and has the status of full time pupil/student. Full time pupil/student acquires the right to enrol in the next grade if he has received positive marks in all the courses. Pupil/student who should repeat the grade (repeater) is a student who at the end of a school year gets two or more poor grades (failed) or who has not passed re-examination or grade exam.

Teachers – Educational work in primary and lower secondary education is performed by teachers and professional associates. Lower primary education is provided by teachers for grades one to five, whereas teaching by courses for grade six to nine is provided by course (subject) teachers. Upper secondary school teachers are: professors, professional associates, professional teachers. Professional associates organize and perform the professional work related to the upper secondary education; they are the pedagogues, psychologists, defectologists, doctors, social workers, programmers, etc. The school is managed by the principal and a steering committee.

Geographic comparativeness: Education statistics refer to the national and municipal level.

Data source:

The source of data on education statistics is the Education Management Information System (EMIS), Public Universities and Private Colleges.

Coverage:

Time series are available since 2002 on annual basis.

Frequency: Data are collected on annual basis.

CHAPTER 5. CULTURE AND SPORT STATISTICS

CULTURE

Culture statistics provide data on cultural activities of cinemas, theatres, galleries, museums, libraries, ballet, philharmonics and data on the number of people employed in these institutions. Data is collected through questionnaires.

Definitions:

Theatre – is a public or private cultural institution, which prepares, organizes and performs theatrical and other performances on stage.

Galleries: The National Gallery of Kosovo is a publicly owned institution and is registered in the central register of the institutions of the Ministry of Culture.

Cinema – is the place where domestic and foreign movies are shown. Cinemas have halls which could be closed or open spaces, or they could be moving cinemas.

Theatrical performance – is a live performance on stage presented before a live audience. Theatres may be national, professional, amateur and children theatres.

Libraries – are cultural, educational and informational institutions that collect, preserve, process and make available their collections for users, provide free access to information, in whatever form such information is deposited.

Museums: They are non-profit institutions and open to the public to research, conserve, collect, communicate and expose movable heritage for the purpose of studying, educating and enjoying in the service of society and its development.

Philharmonic, Opera, Ballet of Kosovo: Encourages, develops, advances, publishes and promotes national and world artistic creativity through performances and concerts.

Geographic comparativeness: At municipal and national level.

Data source: Departments of Culture Youth and Sport at municipal level.

Coverage: Time series are available since 2004 on annual basis.

Frequency: Data are collected on annual basis.

TAB 5.1: CINEMAS BY YEARS 2008-2019

Year	Number of movies	Domestic movies	Foreign movies	Number of viewers	Number of employees	Female
2008	301	97	204	48.964	49	11

¹⁾ Archery and Weightlifting are the sports that have started in 2013, 2014, and Kick-Boxing and Hiking did not reported in 2013, and data are not available for 2014-2017.

CHAPTER 6. SOCIAL WELFARE STATISTICS

Data description: Social welfare data contain information on social protection schemes in the Republic of Kosovo such as: social assistance scheme, scheme for families of martyrs and war invalids, basic pensions, contribution-based pensions, disability pensions, number of abandoned children, and so on.

Definitions:

Social benefits - social assistance scheme provides temporary financial assistance to families who are poor and are selected in accordance with the criteria set forth in law and within the resources allocated for this purpose by the Kosovo Budget.

The scheme of the Department for Families of Martyrs and War Invalids – provides financial support through pensions for KLA war categories.

Basic pension age – monthly paid regular minimum pension for all citizens of Kosovo, who have reached the age of sixty-five (65) years, regardless whether they were employed or not, and who meet the criteria provided by this law.

Pension based on individual savings - is a regular monthly pension for employed citizens in the Republic of Kosovo, who have paid contributions in the former Kosovo Pension Fund prior to 01.01.1999 under the provisions of the Law on Pension and Disability Insurance No.011-24 / 83.

Child abandoned without parental care - child abandoned without parental care is considered any child aged under 18 who is abandoned by parents who for various reasons did not commit, or are not able to perform obligations, responsibilities and parental rights.

Data source: Ministry of Labour and Social Welfare (MLSW), namely the Department of Social Welfare, Department of Pension Administration and the Department of Families of Martyrs and War Invalids.

Coverage: The serial data are available since 2002 on an annual basis, while from 2012 on a quarterly basis.

The frequency of data collection: Quarterly.

CHAPTER 7. HEALTH STATISTICS

Data description: Data on the number of health institution workers by sex, age, qualification and ethnicity. Then, data on morbidity at MFHC, number of visits to PHC, number of inpatients in Kosovo hospitals, number of surgeries, births, treatments and diseases. Primary healthcare indicators in PHC by departments and municipalities, activities of regional hospitals and the University Clinical Centre of Kosovo (UCCK), indicators of quality in regional hospitals.

Definitions:

Morbidity – is measure of frequency of diseases in a population within a certain period. Morbidity can be expressed through incidence and prevalence.

Incidence – presents number of new diagnosed cases of a disease. An incidence rate is the number of new cases of a disease divided by the number of persons at risk from the disease. Incidence enables us to determine chances of someone to get sick by a disease within a certain period.

Prevalence – presents number of total registered cases of disease in a population within a certain period. It can be used to calculate chances of someone to be sick from a disease.

Geographic comparativeness: National and regional level.

Data source: Ministry of Health and National Institute of Public Health, Chambers of Doctors and Nurses, Private Hospitals and Central Bank of Kosovo.

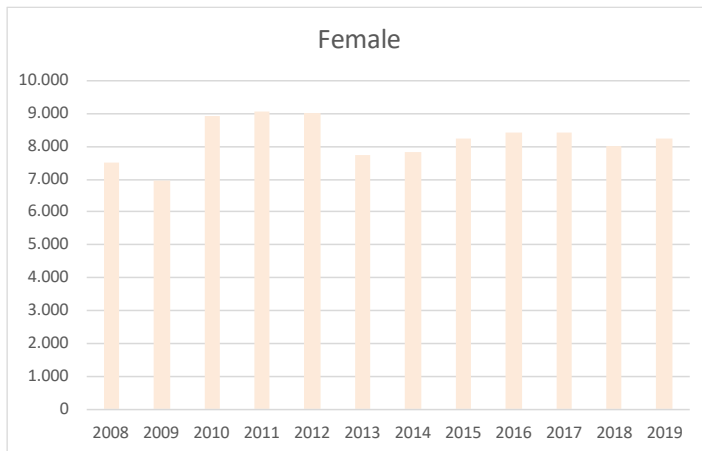

Coverage: Serial data are available since 2004 on annual basis.

Frequency of data collection: Annual.

CHAPTER 8. JURISPRUDENCE STATISTICS

Data description: The publication of the jurisprudence statistics, data are related to offenders by age group for adults and juveniles convicted in all Courts and their branches (General Department, Department for Serious Crimes and Department for Juvenile). Jurisprudence publications present these statistical indicators: persons convicted by gender, nationality, indictment, ways of resolving the indictment, the type of conviction and the manner of commission of criminal offenses.

In the publication adult persons are presented also data to for misdemeanour by courts and type of offense.

Here in the yearbook are reflected only those convicted by gender for both age groups (adult and juvenile) from 2013 under the new organization of courts and data on the prisoners by type of offense.

Definitions:

Criminal offence – is unlawful act defined under the law as a criminal offence, the elements of which are defined in the law and for which the law foresees criminal sanction or any other measure of compulsory treatment.

Juvenile – person between the age of fourteen (14) and eighteen (18) years old.

Adult – person who has reached the age of eighteen (18).

Geographic comparativeness: National level.

Data source: Basic Courts.

Coverage: Data from 2013 are not comparable with previous years due to the reorganization of the courts.

Data collection frequency: on quarterly basis.

TAB 8.1: CONVICTED JUVENILE PERSONS BY GENDER IN 2013 -2019

<i>Basic Courts of Kosovo (Department for Juveniles)</i>								
Year		2013	2014	2015	2016	2017	2018	2019
Gender of convicted	Female	17	14	15	26	40	33	39
	Male	769	826	548	666	726	680	647
Total convicted		786	840	563	692	766	713	686

Note: According to the Law no. 03 / L-199, the organizational structure of the courts has changed. Now there are First Instance Courts, within which are three departments: general, serious crimes department and for juveniles. Due to the reorganization of the courts since 2013 there are no district courts.

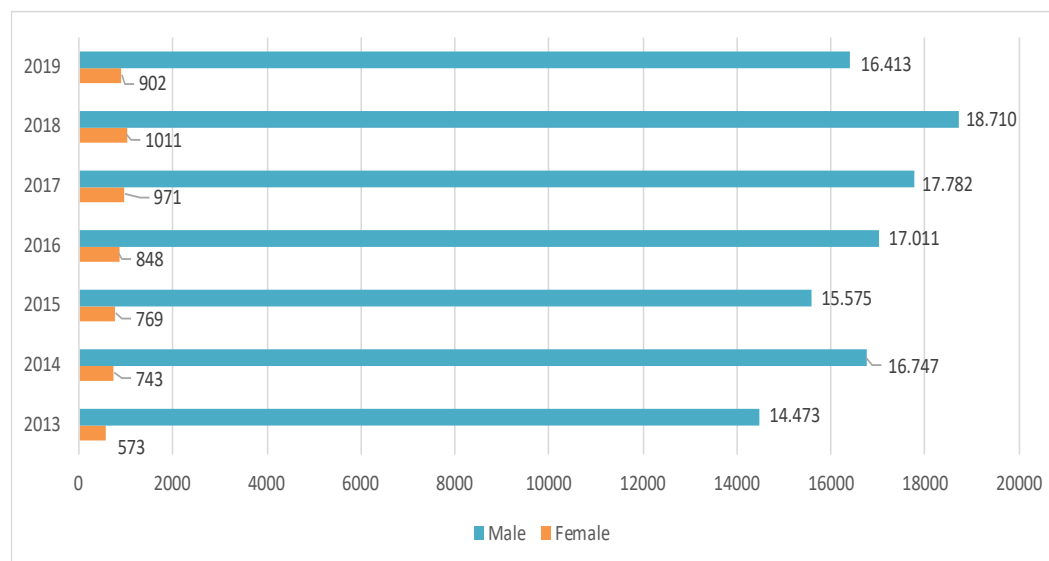

FIG 8.1: CONVICTED JUVENILE PERSONS BY GENDER IN 2013 -2019

2006	130.576	4.838	113.958	258	9.765	1.169	588
2007	130.036	4.315	117.990	180	6.970	298	283
2008	129.776	4.440	115.513	351	8.820	100	552
2009	137.798	3.889	125.613	268	7.562	118	348
2010	143.663	3.143	133.530	469	5.860	20	641
2011	161.937	2.407	152.503	509	6.233	93	192
2012	194.955	1.848	186.438	601	5.779	133	156
2013	213.099	1.822	206.713	582	3.765	115	102
2014	204.166	1.844	197.782	121	4.313	40	66
2015	180.057	1.225	173.694	171	4.693	132	142
2016	193.085	780	188.229	29	3.833	131	83
2017	93.545	721	88.132	31	4.410	116	135
2018	36.668	1.091	31.277	135	3.942	80	143
2019	20.453	869	15.070	48	4.186	88	193
Difference : 2019-2018	-16.215	-223	-16.207	-87	244	8	50

The number of persons convicted of minor offenses in 2019 is lower by 16,215 compared to the previous year.

Note; From the table we see that the number of perpetrators of traffic offenses has decreased by 16,207 persons compared to 2018 because traffic offenses are no longer treated in courts.

CHAPTER 9. LABOUR MARKET STATISTICS

Data description: The LFS publishes population data by age group, education, employment status, dependency level, activity level; population by age group, education, economic activity, profession, professional status, conditions, working hours; unemployment by age, education, duration, job seeking methods, previous work experience, economic activity, profession; then, data on inactive population by age and education, salaries of employed persons.

In the period between 2001 and 2009, the LFS was conducted through annual questionnaires, while from 2012, the survey is of continuous character throughout that year, meaning that 52 calendar weeks are a reference week, where the quarter is divided into 13 reference weeks. Since 2012 this survey is conducted in modern manner through the laptop. The methodology and definitions applied in this statistical research are based on Eurostat regulations.

LFSs are conducted based on a sample, that is, the requested information is only collected for a certain number of respondents, who should represent the whole population.

The LFS data are collected in rural and urban areas and by ethnicity; data are collected through direct computer assisted interviews with households (CAPI).

From 2012 a new sampling framework is being used based on Population and Housing Census of 2011 in the Republic of Kosovo.

Definitions:

Working-age population – includes persons between 15 and 64 years old. This measure is used to provide an estimation of total number of potential workers in an economy.

Labour force - consists of employed and unemployed people, according to clear definitions given below. Inactive persons are not considered as part of labour force.

Employed – persons between 15 and 64 years old, who in the reference week did work for payment, profit or family benefit, in money or in kind, or those who were temporarily absent from their work.

Unemployed – persons between 15 and 64 years old who during the reference week:

- were unemployed, i.e., were not employed with payment and self employed;
- were currently ready for work, i.e., were ready to start working with pay or to be self employed within two weeks; and
- were looking for job, i.e., had taken specific steps during the last four weeks in seeking employment with pay or self employment.

Inactive persons – persons between 15 and 64 years old, who during the reference period were neither employed nor unemployed, under the definitions given above.

Classification of population in these three categories depends on the application of principle of activism, which gives a priority to employment over unemployment and unemployment over economic activity. Classification also depends on clear understanding on which activities are considered as employment. It is important to stress that employment includes activities, either paid or unpaid, and activities for production of goods and services that are sold or not sold in the market.

Labour force participation rate – is the proportion of working age population of a country actively involved in labour market, being either employed or unemployed. It is the proportion of labour force against working age population, expressed in percentage.

$$\text{Proportion of participation in labour force} = \frac{(\text{Employed} + \text{unemployed})}{\text{Working age population}} \times 100$$

Inactivity rate – is the proportion of working-age population of a country, which is neither employed nor unemployed. When aggregated, the inactivity rate and proportion in the labour force makes 100 percent.

Ratio between employment and population, also known as employment rate – is the percentage of working-age population of a country, which is employed.

$$\text{Ratio between employment and population} = \frac{\text{Employed population}}{\text{Working age population}} \times 100$$

Unemployment rate - is the percentage of labour force that is not employed. The labour force and not the working age population, serves as the basis for this indicator.

$$\text{Proportion of population} = \frac{\text{Unemployed}}{\text{Labour force}} \times 100$$

Discouraged workers are persons who have no jobs, who are currently ready to work, but have given up seeking job, since they believe they cannot find a job. They are included in the category of active population.

Youth unemployment – refers to unemployment of persons between 15 and 24 years old. The young people who are neither employed, nor in school or training present the portion of youth (15-24 years old) who are not employed, who do not attend school or training.

Vulnerable employment – refers to self-employed people, who do not have employees or unpaid family workers. This type of employees is less likely to have formal employment relations and they are more likely to be lacking appropriate working conditions.

Others include:

NACE 1.1 (O, P, Q): A) Other community services, social or personal activities; B) private household activities as employers and private household undifferentiated production activities; and Q) extraterritorial bodies or organisations; or

NACE REV.2 (R, S, T, U): Arts, entertainment and recreation; other service activities; household activities as employers; undifferentiated goods and services produced from private household activities their own needs; activities of extraterritorial organisations and bodies.

Geographic comparativeness: national level.

Data source: KAS receives from the Ministry of Public Administration published administrative data on public sector employees and on salaries under Kosovo Consolidated Budget.

The data refer to central and local level aggregated by general service, public rules and security, education, health, economy, recreation and culture, housing and environment.

Coverage: Serial data are available since 2001 on annual basis.

Data collection frequency: Quarterly and annually.

CHAPTER 10. LIVING STANDARD STATISTICS

Data description: Data on consumption expenditure, home consumption, family income and basic socio-economic conditions in which families live. The survey also provides data on some important indicators related to living conditions (housing, possession of long-term equipment in the family, heating conditions, travels and/or holidays) as well as data on basic demographic, economic and social characteristics of the family.

The data collected from HBS will also provide information on the living standard, measurement and composition of total consumption family expenditure and their socio-economic characteristics. One of the specific objectives of Household Budget Survey is to obtain the necessary data for assessing weights that are used to calculate consumer price index.

Questionnaire contains information on demographic composition of households, including individual data for each household member as well as for income, consumption and expenditure, housing conditions, activities in business and agriculture, access to basic infrastructure and public services, etc.

Definitions:

Overall consumption – is the total value of household expenditure on food and non-food items, as provided in Household Budget Survey (HBS), a representative survey at national level which until 2017 has been conducted on an annual basis, while from 2017 it will continue to be conducted every five years.

Home production consumption – Includes any food produced at home and which was consumed by the household.

Overall poverty– Indicates people who are poor compared to what is considered minimum requirement standard.

Extreme poverty – indicates that people are poor because they are not able to satisfy their basic needs for food.

Geographic comparativeness: At national level.

Data source: Households.

Coverage: Serial data are available since 2003 on an annual basis until 2017.

Data collection frequency: On monthly basis.

CHAPTER 11. AGRICULTURE STATISTICS

Data description: The Agriculture Holdings Survey (AHS) has been published on an annual basis since 2004. AHS 2019 is the fifth published publication based on a methodology harmonized with the Eurostat methodology (questionnaire, guide, definitions), which enables international comparability of data.

The purpose of this survey is to provide statistical data on the agricultural sector in Kosovo. The results of the Agriculture Holdings Survey presented provide an important source of information on the state of agriculture in Kosovo.

This publication presents the results in summary form for agricultural land use, agricultural crops, livestock, agricultural inputs (mineral fertilizers, organic, pesticides), labour force in agriculture and farm expenditures for the reference period (31 October 2018 - 1 November 2019). The data presented are mainly from the results of this survey, but there are also some data from administrative sources (viticulture data) from MAFRD and from Agriculture Census 2014.

The survey aims to help calculate the level of development of the agricultural sector in Kosovo and provide the basis for future monitoring of trends in this sector.

Agriculture Survey 2019 in the field was conducted in the 34 municipalities of the Republic of Kosovo. The survey was not conducted in the 4 municipalities in the north of the Republic of Kosovo because the Agriculture Census 2014 (AC) was not carried out in this part and we do not have a register of agricultural households from AC 2014. For the four municipalities in the north we have made an estimation based on the data available from previous surveys in agriculture, in particular from the Agricultural Household Survey 2013 (AHS). Therefore the results presented are representative of the entire territory of the Republic of Kosovo. The data are presented only at Kosovo level.

Definitions:

The survey was conducted using the following definitions:

Agricultural Holding is an independent technical and economic unit of production, where

(1) household or (2) legal entity carries out (3) agricultural activity as primary or secondary activity, under one management and where they use common means of production (land, livestock, equipment, buildings, etc.).

1) Household - means the individual, family, or other community of persons who live together and are fully or partially placed in a household and are supplied with food and other possible elementary living things. Members of this group can join their income to a greater or lesser extent.

Agriculture Household - is a family or community of people where its members are engaged in agricultural production as their main or secondary activity, having a single management, using common means of production, such as land, cars, buildings, etc. The Agriculture Household can produce agricultural products for sale, either for own consumption or for both.

(2) Legal Entities - are agricultural cooperatives, individual businesses and other organizational forms with the legal entity status that have been registered as having the agricultural production as their main activity; As well as enterprises, institutions and other legal entities that are registered in another activity, which have organizational branches or other organizational units where agricultural production is carried out.

(3) Agricultural production means:

- Cultivation of agricultural crops (cereals, potatoes, dried grain legumes, industrial crops, forage plants, vegetables, flowers, decorative plants, seeds, seedlings, trees, grapes, mushrooms, etc.);

- Growing livestock, poultry and other animals (cattle, sheep, goats, pigs, horses, donkeys, mules, chickens, bees, rabbits, etc.); and
- Producing wine from grapes produced in the Agriculture Holding.

As a source for sample design of the Agriculture Holdings Survey 2015 is used the Agriculture Census (AC) 2014.

Threshold:

1. Holding operates 10 acres of land (1 000 m²) or more agricultural land used for cultivating agricultural crops;
2. The economy produces vegetables, flowers or other agricultural products in greenhouses for sale;
3. The economy holds one or more cattle or horses;
4. The economy holds at least 3 adult pigs;
5. The economy holds at least 4 adult heads of sheep or goats and pigs together;
6. The economy holds at least 50 adult birds and female rabbits together;
7. The economy holds at least 20 beehives;
8. The economy produces mushrooms for sale.

For the final design of the 2019 sample, these parameters are considered:

- Sample size,
- Stratification,
- Allocation (Distribution).

Stratification is done by region, class size and type of farm. The selection of Agriculture Holdings for the interview was done by random method.

Agricultural Holdings (AHs) are divided into four (4) categories, according to the size of the classes. AHs of size 1 are the largest, while those of sizes 2, 3 and 4 are the smallest.

Table 1: Variables and criteria for determining class size

Variables	Class size determination criterion		
	Class size 1	Class size 2	Class size 3
Usable agricultural land	≥ 2000 acre	≥ 1000 acre	≥ 200 acre
Cattle	≥ 35 heads	≥ 20 heads	≥ 8 heads
Sheep and goats	≥ 180 heads	≥ 50 heads	≥ 10 heads
Fertilized sheep and fertilized goats	≥ 150 heads	≥ 50 heads	≥ 10 heads
Pigs	≥ 30 heads	≥ 15 heads	≥ 8 heads
Poultry	≥ 1000 heads	≥ 500 heads	≥ 250 heads
Arable land (fields)	≥ 1000 acre	≥ 500 acre	≥ 200 acre

AGRICULTURE CENSUS IN THE REPUBLIC OF KOSOVO 2014

Agriculture Census in Kosovo was conducted in 2014, after more than 50 years. Census has been prepared to be carried out the whole country, but four (4) municipalities in northern Kosovo (North Mitrovica, Leposavic, Zvecan and Zubin Potok) refused to participate. Therefore, data are only available for 34 municipalities.

Data were collected during the period 1 to 20 November 2014, using paper questionnaires for collecting data through face to face interview. In rural areas, the data were collected using the method door-to-door, while in urban areas framework for data collection was the List of Agricultural Households from the Population, Dwellings and Housing Census 2011. Also were interviewed all legal entities with agricultural activity.

Data quality was assessed with the Post Enumeration Survey (PES), which showed that there was no significant coverage error or measurement

AGRO-MONETARY STATISTICS

PRICE INDEX AND PRICES IN AGRICULTURE

Data Description: KAS has started to collect data on prices for agriculture products in November 2003. In the beginning the number of items was limited. With basic switching year from 2003 to 2005 basic prices are collected for 64 different agricultural products. Currently the basic change of year 2005 = 100 base year 2010 = 100 prices are collected for 67 different agricultural products. Index products aim is to measure price movements for products sold by farmer. The plan for the future is to increase the number of products. In addition to the products index is also the Input Price Index.

Price indices have been calculated according to standards for price statistics in European Union. The project for calculating these prices and price indices was conducted in the frame of the project of "Improving agro monetary statistics" in cooperation with Statistics Sweden and with financial support by Sida (Swedish International Development Cooperation Agency).

Price indices have been calculated according to standards for price statistics in European Union. The project for calculating these prices and price indices was conducted in the frame of the project of "Improving agro monetary statistics" in cooperation with Statistics Sweden and with financial support by Sida (Swedish International Development Cooperation Agency).

Prices have been collected in seven regions: Peja, Pristina, Prizren, Ferizaj, Gjilan, Gjakova, and Mitrovica regions. Prices are collected around the 15th in every month. From the beginning number of products for which prices were collected was increased step by step. According to EU standards, quarterly and annual indices are supposed to be calculated by each member states. EU indices in this publication follow the same EU methodology.

Total weight, quarterly weights and monthly weights are fixed during the basic period. They all reflect the situation that existed in 2005. By having fixed weights, index is guaranteed only for measuring the price changes, which is the purpose of index.

Definitions:

Products that create the basis for Producer Price Index are divided in two main groups: plant and animal production. For plant products, prices are collected for the following groups: cereals, fodder, vegetables, potatoes and fruits. For animal products prices are collected for animals and animal products. Prices for animals were collected for four categories: cattle, sheep, pigs and poultry.

These prices are based on animal live weight. Within the animal farming products, prices are collected for milk, eggs and honey. All prices are calculated in Euros and measuring units are kg, litre and pieces.

Geographic comparison: Price monitoring is covered in the entire country and price index and agricultural price index is representative at national level.

Data sources:

Data were collected in the market, farms, agricultural pharmacies, veterinary pharmacies and other places where prices of agricultural outputs and inputs can be collected.

Data are collected from regional offices of Kosovo Agency of Statistics.

ECONOMIC ACCOUNTS FOR AGRICULTURE

Data description: The compilation of Economic Agricultural Accounts has started in 2010 and the first publication covered the period 2005-2008, and until now data are published for period 2005 – 2012. Data are compiled according to the methodology laid down by Eurostat: Manual on Economic Accounts for Agriculture and Forestry EAA/EAF 97 (Rev.1.1) and Commission Regulation (EC) No. 306/2005. Economic Accounts for Agriculture (EAA) are based on the Regulation of Parliament and European Commission (EC) No. 138/2004 of 5 December 2003 on Economic Accounts for Agriculture in the Community.

Definitions:

Economic Accounts for Agriculture - They are satellite accounts of the European System of Integrated Economic Accounts (ESA). It has been published by the Statistical Office of the European Communities (Eurostat) since 1964. Although the basic concepts and accounting rules are identical with those laid down in the ESA, the special characteristics and requirements of agriculture are also taken into consideration in the Economic Accounts for Agriculture.

Main data sources:

For compilation of Economic Accounts for Agriculture there are two surveys carried out by the Kosovo Agency of Statistics: Agricultural Household Survey (AESHB) and Statistics of Prices in Agriculture. Other data sources include Veterinary Services and some administrative data from the Ministry of Agriculture, Forestry and Rural Development. When data on certain products are missing, the assessments of local and international experts are used.

Due to the inclusion of new data in the Economic Accounts for Agriculture database, slight changes can be observed compared to data published in the previous year's Statistical Yearbook. The methodology for incorporating these data remains the same.

CHAPTER 12. ENERGY STATISTICS

Data description: Data for preparation of Energy Balance are administrative data taken directly from the Kosovo Energy Corporation (KEK), Kosovo Electricity Distribution and Supply Company (KEDS) and International Trade Section within the Economic Department of KAS.

Definition:

Electricity – is the form of energy which is transported through metallic conductors.

Energy – is any form of energy (electricity, heating or natural gas) produced or generated for supply or sale.

Energy fuel– the fuel that releases energy during the combustion, in a word, is called energent.

Energy enterprise – means the energy enterprise performing one or more of the following energy activities: production, transformation, transport, distribution, supply, trade or deposition of electricity, heating energy or natural gas, based on a license issued under the Law on Energy Regulator or without a license, if such license is not required.

Coal production – presents the quantity of coal that is obtained from mines.

Electricity generation – presents the quantity of energy generated in power plants and hydro power plants.

Energy generation – means generation of electricity, heating or any other form of energy.

Gross Energy Production – presents the total quantity of electricity generation in power plants and hydro power plants.

Net Energy Production – presents quantity of produced electricity.

Electricity import– presents the quantity of energy purchased from outside the national border.

Electricity export – presents the quantity of energy sold outside the national border.

Electricity exchange – presents the quantity of electricity which is exchanged with energy from outside the country.

Loss of electricity – presents the quantity of electricity which is lost in transmission and distribution.

Consumer – means wholesale consumer or end consumer of energy.

Privileged consumers (220 -110kV) – are large consumers (0.4kV) who enjoy the status of privileged consumer.

Distribution – means transportation of electricity, heating or natural gas through the high voltage, medium voltage power lines or medium or low pressure tubes in order to transport it to consumers, not including supply.

Data source:

Kosovo Energy Corporation (KEK), Kosovo Electricity Distribution and Supply Company (KEDS), Kosovo International Trade Statistics.

TAB 12.1: PRODUCTION AND CONSUMPTION OF COAL, PRODUCTION OF ELECTRICITY IN POWER AND HYDROPOWER PLANTS, IMPORT AND EXPORT OF ELECTRICITY BY YEARS 2002-2020

Year	Coal production in thousand tons	Gross electricity production in PP in GWh	Energy generation in hydropower plants	Energy consumption in GWh (including consumers 220-110kV)	Imports of energy GWh	Exports of energy GWh
2002	5.527,9	3.151,7	:	1.950,4	816,1	648,2
2003	6.465,9	3.221,1	:	2.041,1	637,3	277,6
2004	5.658,3	3.481,1	:	2.139,3	650,7	194,7
2005	6.391,1	3.999,5	:	2.109,4	490,7	225,8
2006	6.532,4	3.970,5	:	2.154,9	537,9	253,3
2007	6.715,4	4.309,5	93,2	2.391,6	623,3	360,0
2008	7.842,0	4.505,8	75,7	2.941,0	647,6	235,0
2009	7.870,7	5.260,0	88,7	3.200,7	767,5	113,9
2010	7.958,1	5.481,0	115,5	3.480,3	816,6	350,6
2011	8.212,1	5.696,4	75,4	3.684,9	816,2	371,2
2012	8.028,4	5.847,2	65,0	3.611,6	625,1	472,8
2013	8.219,4	6.248,3	136,7	3.705,6	521,7	856,9
2014	7.204,2	5.324,0	151,4	3.772,0	875,3	474,8
2015	8.241,1	5.978,7	141,7	3.971,9	684,3	552,5
2016	8.800,8	6.248,8	234,6	3.595,3	458,8	1.064,2
2017	7.574,7	5.725,9	180,2	4.107,8	742,0	885,7
2018	7.169,8	5.600,5	311,5	4.017,0	659,2	671,5
2019	8.063,1	6.036,6	326,5	4.491,3	1.597,8	1.457,1
2020	8.537,9	6.663,0	262,8	4.587,9	2.587,4	2.715,4

FIG 12.1: ELECTRICITY CONSUMPTION BY SECTOR AND YEARS 2009-2020

CHAPTER 13. HOTEL STATISTICS

Data description: Statistical data related to hotel and tourism activities are taken from the statistical research organized in the entire territory of the country through regional statistical offices (in total 7).

Based on the KAS statistical program, the data are obtained about the number of hotels, number of workers, accommodation capacities (rooms and beds), number of visitors and nights of stay by months and foreign visitors by country.

Definitions:

Hotel - Hotel unit is a company, which in the business register is registered under the hotel activities. This group also includes private hotel units. Depending on the services they provide, these units may be divided into hotels, motels, etc.

Tourism – Tourism includes activities of persons who travel and stay in places different from their usual place of residence, for a period not longer than a calendar year and purpose of such travel is leisure, business or others.

Visitor – is the person who spends at least one night in a hotel in the country he/she is visiting. For tourist statistics purposes the term “visitor” represents a person travelling to different place from their usual place of residence for less than 12 months. He/she may be domestic and foreign.

Local visitor – is a person with permanent residence in Kosovo, but who stays for at least one night in another place in Kosovo.

Foreign visitor – a person with permanent residence outside Kosovo, who stays temporarily in Kosovo for at least one night.

Overnight visitor – a visitor that stays one night in a hotel in our survey is called one night-stay.

Data source:

Regular quarterly research on hotel units observed throughout the territory of the country.

TAB 13.1: NUMBER OF LOCAL AND FOREIGN VISITORS AND THEIR NIGHTS OF STAY BY YEARS 2008-2020

Year	Number of visitors		Nights of stay	
	Local	Foreign	Local	Foreign
2008	19.678	24.616	22.602	46.910
2009	52.631	36.318	54.876	76.042
2010	44.662	34.382	45.123	76.394
2011	42.044	30.349	44.757	65.584
2012	49.973	30.349	52.008	90.968
2013	45.380	50.074	54.867	83.883
2014	46.477	61.313	55.274	102.066
2015	60.200	79.283	81.372	120.669
2016	93.434	163.986	128.009	267.083
2017	88.066	162.234	122.283	273.394
2018	108.043	192.761	155.047	321.308
2019	109.725	177.358	168.821	321.581
2020	67.184	85.215	113.738	152.753

* Hotel data starting in 2018 has risen to weight in order to achieve results at the country level. As a result, data for the years 2016 and 2017 have been revised because they are raised in weight. Revision has been made that data is comparable to 2018 data..

CHAPTER 14. STRUCTURA BUSINESS STATISTICS

The SBS research started for the first time in 2006, with 2005 as reference year. Since 2006 this research has become integral part of KAS Statistical Program and is based on company statements.

This research and data it provides aim to present some economic indicators by structure of economic activities.

The research results are at the same time used for the requirements of national accounts and are an important source in developing the GDP with business approach.

The main purpose of structural business statistics is to present the structure of business activities in Kosovo through economic data and to enable comparing data at the international level, taking into consideration European standards on structural statistics and the European System for National Accounts.

The survey aims to meet the requirements for a more complete statistical information in conditions of market economy and provide data on economic activities of companies throughout territory of the country.

Methodology

Methodology used in developing instruments for this survey, nomenclature and preparation of data for publication is in accordance to Eurostat rules and recommendations.

The survey was conducted in the entire territory of Republic of Kosovo and includes data on the following economic activities: extracting industry (mines, quarries), manufacturing industry, production and distribution of electricity, gas, steam and water, construction, trade, hotels and restaurants, transport and telecommunications, business and other services. It does not include agriculture, hunting and forestry, fishing, finances and public administration, as these branches are subject of other surveys.

The sample was extracted using random selection of businesses for each class of the Nomenclature of Economic Activities in order to involve them in the highest level of turnover for all economic activities.

In the data collection we have applied the methods that we considered most efficient for the conditions and circumstances in our country. The survey was mainly conducted with the method of direct interviewing of enterprises by surveyors, as well as methods of leaving the questionnaire to businesses and in certain cases with methods of sending the questionnaire electronically.

Questionnaire design and content was developed based on EC Regulation on structural statistics of companies mentioned above. Some elements (questions) were added to questionnaire that could be used for other purposes in economic statistics or national accounts.

Data from the structural survey of enterprises are weighed in order to obtain results at country level. The weights are calculated based on the number of employees for the particular economic activity. For other purposes, such as for example, turnover and other information from the Statistical Business Register.

Definitions:

Enterprise– is the smallest unit of combination of legal unit and production or services unit, which has independency in decision making, particularly in using its material and monetary sources. A company can exercise one or more economic activities.

Active enterprises - are considered only companies that have declared one of the taxes or any employee for the reference year.

Employees– Include all persons working in an enterprise, including owners, employees with pay and members of the family who work without pay.

Turnover value – includes amounts invoiced by the company during the reference period and corresponds with the market sale of goods and services provided to others.

Costs or purchases – present amount or total values of purchases completed by the company for business needs within a calendar year.

Investment during the reference period – presents the value of long term goods purchased by companies or incurred in its own account with purpose of using them for a period of not less than 1 year in the production process, including the land.

Publication - Structural Business Survey is published on an annual basis and has recently been published in 2018.

Note: As of 1 September 2014, the nomenclature of economic activities is in the new version NACE Rev. 2, as well as data published for previous years are converted into this version.

Statistical Yearbook of the Republic of Kosovo, 2021

Economic sector	
A	Agriculture, forestry and fishing
B	Mining and quarrying
C	Manufacturing
D	Electricity, gas, steam and air conditioning supply
E	Water supply, sewerage, waste management and remediation activities
F	Construction

FIG 14.4: EXPENDITURES BASED ON ECONOMIC SECTOR BY YEARS 2008-2019

CHAPTER 15. STATISTICAL REPERTOIRE OF ENTERPRISES

Data description: Data on newly registered and terminated businesses are presented according to year, economic sector, municipality, categorization according to the number of employees and according to the legal form of the organization.

Definitions:

Nomenclature of Economic Activities (NACE) - is the translation and adaptation of nomenclature of economic activities of the European Community (eng. NACE). Classification of economic activities exerted by businesses in the four-digit level (class level) and from 1 September 2014 onwards is to use the newest version of NACE Rev. 2. Also, some of the data published, are converted in this version.

Nomenclature of Economic Activities NACE Rev. 2 consists of classes of a total of 615 in the four-digit level ranging from 0111 to 9900, grouped into 21 sections of economic activities from A to U, according to which the statistics on the number of new and terminated businesses are presented.

Legal form (type of business) - Represents definitions applied to legal forms of enterprises under Regulation 2001/16 and Law No.02/L123 on commercial companies and shareholding, which shall apply for the registration at the Kosovo Business Registration Agency (KBRA).

Data source: Data source is Kosovo Business Registration Agency (KBRA) in the Ministry of Trade and Industry.

CHAPTER 16. CONSTRUCTION AND HOUSING STATISTICS

Dwelling – A whole constructed unit intended for dwelling purposes that consists of one or more rooms, with accessories (kitchen, lobby, corridor, toilet, etc) or without accessories, which has one or more entrances and is intended for dwelling.

Common (conventional) dwelling – A room or suite of rooms and its accessories (lobbies, corridors etc.), in a permanent building or structurally separated part thereof which is designed (or converted) for permanent habitation, such as a house or apartment. It has to be surrounded by walls and covered by a roof and it has to have direct access from the street or from a public or communal staircase, passage, gallery or grounds (i.e. when the occupants can enter and leave without passing through another household's accommodation).

Other type of housing unit - Housing unit which is mobile (e.g. a tent or a caravan), semi-permanent (e.g. a hut or a cabin), improvised (e.g. a shuck or a shanty) or not designed for human habitation (e.g. a garage, a shop, a natural shelter) but which is used at the time of the census as the usual residence of one or more persons.

shelter) but which is used at the time of the census as the usual residence of one or more persons.

Room - Spatial unit of a dwelling intended for living, separated from the other rooms by stable walls (reaching from the floor to the ceiling or roof covering), at least to a height of 2 meters above the ground, of a size large enough to hold a bed for an adult (4 square meters at least) and at least 2 meters high over the major area of the ceiling with a surface not less than 4m².

Therefore, normal bedrooms, dining rooms, living rooms, habitable cellars and attics, kitchens and other separate spaces used or intended for habitation are counted as rooms (if they correspond to the above mentioned definition).

The kitchenette (i.e. a kitchen of less than 4m²), verandas, utility rooms (e.g. boiler rooms, laundry rooms) and lobbies are not counted as rooms; nor do bathrooms and toilets (even if they are more than 4m²). Rooms separated from the dwelling but functioning with it and usable by the household are considered part of the dwelling and are included as part of the dwelling.

Rooms for commercial purposes – are rooms that the household uses entirely or mainly for business purposes or professional work, such as, shops or office space, etc.

Surface of rooms in m² - takes into consideration the total surface of all rooms according to the definition of room in m².

Building - Any independent structure containing one or more dwellings, rooms or other spaces, covered by a roof and enclosed within external walls or dividing walls which extend from the foundations to the roof, whether designed for residential or for agricultural, commercial, industrial or cultural purposes or for the provision of services.

Residential building – are considered and were subject of registration, buildings designed and dedicated for habitation.

Non-residential building - Building not designed for habitation but used at least by one person as usual residence at the time of the census.

The number of floors - is counted from the ground floor upwards, including the ground floor itself.

Year of construction of a building - The year when the building was completed or, if any, the year when major constructional changes were finalized.

Materials of which outer walls of the building are constructed – Answers to this questions were taken by the enumerator from owner of the dwelling, tenant or other person who has lived in ta dwelling, or from enumerators visual sight (wherever possible).

CHAPTER 17. TRANSPORT AND COMMUNICATION STATISTICS

Data description: Transport statistics include a broader system of information on transport of passengers and goods, infrastructure of roads, railways, etc., and means of all types of national and regional transport. Transport statistics also cover the measurement of road and railway traffic.

International air transport is carried out through Pristina International Airport Adem Jashari, the only airport in the country that performs such function.

These data are administrative data and were provided by the Kosovo Railways, Pristina International Airport Adem Jashari, Kosovo Post and Telecommunications and Ministry of Infrastructure, respectively Department of Roads of Kosovo.

Definitions:

Public Road - means the area of general traffic importance which may be used by traffic participants under the conditions promulgated by the competent body;

Motorway - public road particularly built and designated for the movement of motor vehicles, which is marked with special traffic signs, which physically separate carriageways for movement in opposite directions of lanes of a width of at least 3, 5 meters, depending on the terrain configuration, with one lane for emergency stops on both sides of the highway, with a width of at least 2.5 meters.

National road - a public road officially categorized as a national road, which connects two or more towns and which may serve as a link to regions outside Kosovo;

Regional road - means the public road linking the centers of economic importance to two or more regions.

Local road - a public road officially categorized as a local road that connects habitable spaces within a municipality settlement.

Urban road - means the public road linking habitable spaces within the settlements of a municipality.

Uncategorized road - means a road that is not designated as a public road, but used for traffic as a way to use the forest, accumulative lake road, and road for agriculture destination and similar.

Unpaved road - means the road without road surface, and without road surface even to the point of connection with the public road.

Data source:

Source of data used are: Ministry of Infrastructure, respectively the Directorate for Roads, RAEPK - Regulatory Authority for Electronic and Postal Communications, Post and Telecom of Kosovo, International Airport "Adem Jashari" - LIMAC and Kosovo Railways.

MAIN ROADS NETWORK IN KOSOVO IN 2020

CHAPTER 18. KOSOVO INTERNATIONAL TRADE STATISTICS

Sources: The statistics of trade is compiled mainly from the documents supplied by importers and exporters (or their agents) to the Customs authorities. The document is the Single Administrative Document (SAD) used for Customs clearance purposes. The information on the document is captured by the Customs Information system.

Responsible entities for collecting and publication of data: Customs administration is responsible for collecting, entering and processing data from customs document. The statistical data entered into the SAD are reported to KAS electronically on monthly basis by the Customs Administration.

KAS is responsible for processing, developing and publication of foreign trade data. These statistics contain data by the type of customs procedures. Additional work includes correction and approval of customs data.

Coverage: External trade statistics do not include temporary import and export of goods, which shall be returned unchanged after a certain period of time, such as services, repairs, money for salaries, money in gold, Kosovo vehicles that get fuel supply abroad, import of goods for liaison offices and other diplomatic missions in Kosovo, personal luggage of passengers, commercial examples and postal packages of low value.

Registration system: External trade statistics are compiled in accordance with the 'special' system (facilitating definition) of recording international trade. By this system, imports and exports are recorded at the time when goods move across the territory (or area) under the free flow that is the part when goods may be sold without any customs restriction. The facilitating definition means that beside regular import and export transactions, also inward and outward processing is included.

Special exports include exports of goods: exports after inward processing, exports for outward processing and exports that are not registered in the customs.

Special imports include imports of goods: by imports for inward processing (S.S) after external processing imports, imports that are not registered in the customs.

Goods in transit are excluded.

Validation: For imports the "cif" value is used (cost, insurance and freight to the point of entry in Kosovo). For exports the "fob" (free on board) value is used. This is the cost of goods purchased abroad, including packing, transport within the state, loading charges, insurance and other charges accruing up to the point where the goods are put on board the exporting vessel or aircraft or are conveyed to the land frontier. The invoice value is recalculated to the value at the Kosovo's border by adding or subtracting the whole or in parts the costs of transport, loading, unloading and insurance, depending on the terms of delivery by the contract.

The value excludes:

any sum receivable by the exporter by way of export refund, drawback, subsidy or other bounty.

any foreign customs duties or freight charges beyond the port or point of exportation.

Valuation is in euro. For transactions in which the value is expressed in a foreign currency, conversion to euro is done using the daily current exchange rate.

Reference period: The calendar month is the basic period for compiling the data. On the base of customs data, the time of recording the imports/exports transactions is the date of submission of the customs declaration or according to some other date valid for the implementation of the customs regulations.

Units of quantity: Quantity of imported and exported goods indicated in the net weight, if that can be determined, taking into account the nature of the product and in the supplementary unit as described by the customs tariff nomenclature.

Net weight is the usual unit of quantity provided. The weight of containers, cases, jars and packing materials, are excluded.

Other units of quantity are used for some commodities, notably live animals, motor vehicles, domestic appliances, watches, clothes (where used as the unit number), shoes (where the number of parties), floor coverings (where used square meter) and beverages (where volume is used).

Partner countries: In this publication, imports are recorded by country of origin (as opposed to country of destination). Goods obtained or produced in a country originate from the same place. A product in the production of which included two or more countries, the country of origin is considered the country in which it made the last significant processing. Packing, repacking, sorting is not regarded as manufacturing processes.

Exports are classified by country of final destination. The final destination of the goods is considered the last country to which the goods are destined. This does not mean that is the country where the goods will be unloaded or which shall be consumed.

Classification of the country: Nomenclature of countries is the classification of countries (geonomenclature) by the Official Journal of the European Communities, published every year. Since January 1999, is used ISO alpha-2 coding system of the United Nations, where each country is identified by a two-letter code.

Classification of goods: Statistics are collected using the Combined Nomenclature (CN) 8 digit - tariff and statistical nomenclature of the EU. This nomenclature is managed and updated annually by the Commission in cooperation with Member States. CN is aligned with the 6-digit Harmonized System of Commodity Description and Coding System (HS) - the nomenclature of the Customs Cooperation Council that is used throughout the world for applying customs tariffs and compiling external trade statistics. CN contains about 10,400 8-digit sub-headings, the first 6 digits of which are identical with the figures of the Harmonized System (HS).

The Standard International Trade Classification (SITC), Revision no. 3 (SITC Rev. 3), was developed by the United Nations for international comparability of advanced foreign trade statistics.

Standard International Trade Classification (SITC) Revision no. 3 contains about 3,100 basic headings (5-digit). These are combined in 261 groups (3-digit), 98 Divisions (2-digit) and sections 10 (1-digit). For example, Section 6 (Manufactured goods classified chiefly by material) consists of 9 Divisions, 61 to 69. Division 64 (Paper, paperboard and articles thereof) consists of two groups, 641 and 642, which together make up 72 basic headings, such as 642.94 (Paper handkerchiefs, towels, tablecloths, and the like).

SITC Revision no. 3 is identical to the structure of the HS. Each of the categories in the SITC (including all the basic headings) is equivalent to a combination of HS headings (including the combination of CN headings).

Publication of data: Monthly data are provisional and published 24 days after the reference month, annual data are published in June so each month are published monthly statistics of external trade of Kosovo and each year are published the final data, Kosovo International Trade Statistics.

CHAPTER 19. NATIONAL ACCOUNTS STATISTICS

Data description: National Accounts present a comprehensive and complete overview of all transactions that have occurred within a certain period of time, and in this way they represent a general overview of Kosovo economy. They provide a sustainable systematic statistical description of economy in general and mutual relations between different economic sectors, economy in general and non-resident part.

Definitions:

Gross Domestic Product (GDP)

The main economic indicator in the System of National Accounts is Gross Domestic Product (GDP), which presents the performance of the economy of a country in a certain period.

Gross Domestic Product (GDP) in Kosovo is compiled:

- On an **annual** basis by expenditure and production approach (economic activities) with current and constant prices;
- On a **quarterly** basis by expenditure and production approach (economic activities) with current and constant prices.

Gross Domestic Product (GDP) by expenditure approach – Is the sum of all final expenditure on goods and services and is based on the methodology of the System of National Accounts - SNA 2008. These expenditures are grouped into three main categories: final consumption, gross capital formation and net export and import (E-I). Since Gross Domestic Product (GDP) measures domestic production, the total amount of import expenditure is subtracted from the expenditure, using the following formula:

Gross Domestic Product (GDP) by expenditure approach

Gross domestic product according to the expenditure approach is the sum of all final expenditures on goods and services by resident institutional units (final consumption and gross capital formation), plus exports and minus imports of goods and services.

Methodology

GDP calculations are methodologically based on the basic concepts of the European System of Accounts (ESA 2010). ESA 2010 was implemented by European Union member states in September 2014.

<https://ec.europa.eu/eurostat/documents/3859598/5925693/KS-02-13-269-EN.PDF/44cd9d01-bc64-40e5-bd40-d17df0c69334>

Final Household Consumption - The household consumption is the main component of Gross Domestic Product by expenditure approach and represents the costs of the resident households, in order to obtain goods and services necessary for their needs and demands. It includes not only directly paid for goods and services, but also the acquisition through income in kind or from own production.

The Total Household consumption – is based on the data from the Household Budget Survey, which is organized in KAS.

Final consumption expenditure of General Government: Government final consumption is measured as the sum of purchases of goods and services, compensation of employees and consumption of fixed capital less receipts from sales.

Final Consumption of Non-Profit Institutions Serving Households - Non-profit institutions serving to households include the non government organizations (NGO).

Gross capital formation:

Based on ESA20120 methodology, the Gross Capital Formation represents the sum of the Gross fixed capital formation and changes in inventories.

The estimation of Gross Fixed Capital Formation (GFCF) - covers the possession of all tangible assets and major improvements to tangible non-produced assets, which are used more than one year. The estimates on the GFCF include the following types of assets: dwellings, other buildings and structures, machinery and equipment.

Main data source on GFCF are import data for the machinery and equipments. Also the domestic production of construction material is used.

The changes in inventories are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories. The estimation of the changes in inventory is based on the results of the Structural Business Survey, carried out by KAS

Export and import of goods and services:

Export of goods and services - consists of transactions in goods and services from residents to non-residents.

Export and import data of goods and services are obtained from the Central Bank of Kosovo (CBK).

Gross domestic product by production approach (by economic activities)

Gross domestic product by the production approach is the sum of gross value added of different institutional sectors or different industries plus taxes on products and minus subsidies on products (which are not allocated to sectors and industries).

The compilation of the Gross Domestic Product with the production approach is based on the methodology of the European System of National Accounts (ESA2010).

<https://ec.europa.eu/eurostat/documents/3859598/5925693/KS-02-13-269-EN.PDF/44cd9d01-bc64-40e5-bd40-d17df0c69334>

Production (Output)

Output is measured in a given time period as the value of goods and services produced by resident establishments. Output can either be delivered to other units or it may be used for own-account consumption or own-account gross fixed capital formation.

Intermediate consumption

Intermediate consumption is the total value of inputs used, consumed or transformed in the production process. Intermediate consumption includes goods and services produced by other economic units only (own production is excluded from that). Similarly to output, it is measured in a given time period.

Value added

Value added is a vital production economic concept that refers to the value generated by a unit engaged in productive activity. Gross value added is defined as total output minus intermediate consumption.

Value added is calculated separately for each resident activity in an economy. It provides an important measurement of productive activity at detailed level.

Taxes on products

Taxes on products are taxes payable per unit of certain goods and services such as: value added tax (VAT), excise and customs duties.

Subsidies on products

Subsidies on products are non-refundable payments to enterprises as a certain amount of money per unit of a good or service.

Data source:

Surveys carried out by KAS and administrative sources, Ministry of Finance, Central Bank of Kosovo, Ministry of Public Administration and Ministry Agriculture, PPI of Eurozone countries for the market of non-EU countries.

CHAPTER 20. FINANCIAL SECTOR STATISTICS

Deposits in other depository corporations

Description: Other depository corporations are comprised of financial and quasi financial resident corporations (with the exception of Central Bank), which are involved in financial intermediation and whose obligations are part of broad money. In Kosovo, other depository corporations are commercial banks. Deposits in other depository corporations are divided by sectors, subsectors and by currency.

Until May 2004, deposits were classified in deposits of natural persons and legal persons. Deposits of legal persons have included deposits of all institutions, except those of banks and households. Furthermore, household deposits until May 2004 included deposits of OJSHEF. From June 2004 to December 2007, deposits of insurance companies include deposits of pension funds.

Classification of deposits in maturity is done based on the criteria of original maturity (e.g., if in January 2012 there is a deposition for a maturity period of one year, then this term shall be reported in the voice "up to one year", until the moment where the term is over. From 2010, saving deposits are reported as a separate voice, which earlier were included in the fixed term deposits, by deadlines. From January 2010, there is a more detailed division in the structure of terms of deposits. Within the voice "over 2 and less than 5 years", until the end of 2009 were included deposits with a term of "over 2 years".

Periodicity: Monthly.

Data source: Commercial banks

Loans of other depository corporations

Description: Other depository corporations are comprised of financial and quasi financial resident corporations (with the exception of Central Bank), which are involved in financial intermediation and whose obligations are part of broad money. In Kosovo, other depository corporations are commercial banks. Loans of other depository corporations are presented (1) as cumulative situation and (2) as new loans given in the course of the month.

In the context of cumulative credits, including the value of the credit is active, respectively ODC requests to relevant sectors, public nonfinancial corporations, private non-financial corporations and households, separated by deadline. In this context, not including interbank credit activity. By the end of 2009, loans and leases were presented in a balance sheet item, but since 2010, they appear as two separate items. Besides sharing the institutional sectors and sub-sectors, loans are also divided according to purpose. This division is based on the classification NACE economic sectors associated with.

New loans include loans granted within a period of reference and as such are flow data (eg loans for the month of May 2012 represents only loans granted during the month, excluding loans granted in prior periods, as is the case in cumulative loans).

Periodicity: Monthly.

Data source: Commercial banks

Interests rates of other depository corporations

Description: Other depository corporations are comprised of financial and quasi financial resident corporations (with the exception of Central Bank), which are involved in financial intermediation and whose obligations are part of broad money. In Kosovo, other depository corporations are commercial banks.

The interest rates are calculated and published using effective annual rate. Sectors are divided in nonfinancial corporations and households, in consistence with international standards.

As of January 2008 the method has changed where the loan interest rates include administrative costs applied by the commercial banks of given loans, and which are paid by the borrowers. From January 2008, also the statistics on overdrafts are presented as cumulative and as such are not included in calculation of the average weighted arithmetic rate. From 2010, calculation of weighted rate does not include loans with favourable conditions. From this period was applied a new division of loans by purpose, consistent with NACE system.

Calculation and publication of effective interest rate for all other depository corporations uses weighted arithmetic average and criteria like standard deviation and minimum observation. The formula for calculation of effective rate is as follows:

$$AAR = \left(1 + \frac{AG}{n}\right)^n - 1$$

where *AAR* is annualized agreed rate, *AG* is the nominal contracted rate agreed among the parties, and *n* is the number of capitalization periods per year. This *n* = 1 for yearly interest payments (12/12), *n* = 2 for semi-annual interest payments (12/6), *n* = 4 for quarterly interest payments (12/3) and *n* = 12 for monthly interest payments (12/1).

For example, a customer and bank agree on a two-year loan at 10% per annum (p.a.) for entire maturity, where interest and principal is repaid at the end of each month. The annualized agreed rate for this loan is then 10.47% and calculated as follows

These data are noncumulative and include new contracts during the respective month. For more information on calculation of interest rate consult Interest Rate Report.

Periodicity: Monthly.

Data source: Commercial banks.

Data source for statistical tables of financial sector is Central Bank of Republic of Kosovo <https://bqk-kos.org/?id=37>.

CHAPTER 21. PRICE STATISTICS

CONSUMER PRICE INDEX (CPI), HARMONIZED INDEX OF CONSUMER PRICES (HICP)

Data description: Consumer Price Indices (CPI) are published as average annual indices 2002–2020 (2015=100), where are shown annual price indices, weights used in Consumer Price Index, annual changes of consumer price indices and average annual process for some goods and services.

Consumer Price Index is calculated based on COICOP classification structure (classification of individual expenditure by purpose) completely in line with expenditure structure used by the Eurostat.

Based on this classification, expenditure is classified into 12 main groups, as:

- Food and non alcoholic-beverages,
- Alcoholic beverage and tobacco,
- Clothing and footwear,
- Rent, water, electricity, gas and other fuel,
- Furniture, household and maintenance,
- Health,
- Transport,
- Communication,
- Recreation and culture,
- Education,
- Hotels, coffee-houses and restaurants,
- Other goods and services.

Eurostat has defined HICP as European standard for consumer price indices. The calculated indices and their results are presented through classification of individual consumption by purpose (COICOP), an international classification which categorizes consumption in divisions, groups and classes of items. Using COICOP, KS has divided 91 classes of defined consumption (at 4-digit level) with further 420 products (basic aggregates). KAS has defined weight to every aggregating element and every month collects prices for each elementary aggregate.

Definitions:

Data on prices for the most representative goods and services are collected through the Consumer Price Index questionnaire by the staff of regional offices in the main centres in the country: Gjakova, Gjilan, Mitrovica, Peja, Prizren, Prishtina and Ferizaj. Total of 415 products were monitored with over 6800 prices in supermarkets, shops, markets and other retail points and in services enterprises.

Consumer Price Index is used as official measure of inflation in our country, deflator of values for sector of national accounts, deflator for calculating volume indices, variable for macroeconomic analysis, deflator for indices of salaries, pensions and income when necessary and for developing monetary policies for the Central Bank of Kosovo.

Consumer price index produced by KAS is developed using the method of Harmonized Index of Consumer Prices (HICP).

Geographic comparativeness: Price monitoring covered geographically the entire country.

Data source: Services and trade companies.

IMPORT PRICE INDEX

Data description: Import Price Index (MPI) is published as annual average index from 2006-2019 (2010=100) by sectors based on the Harmonized System of World Customs Organisation (WCO) and

in accordance with European standards and methodology. Indices are presented in tables and graphs. Import price index may be described as a chain Laspeyer-type index with yearly link.

Definitions:

Prices for calculating import price index are collected with individual questionnaires for each article on quarterly basis in the entire territory of Republic of Kosovo, carried out by the staff in KAS regional departments.

Data source:

Prices for calculating import price index are collected from most representative import companies for chapters and sectors, which are spread in the entire territory of the country. Weights for calculating import price index are obtained from the previous year data on foreign trade as published by the KAS.

PRODUCER PRICE INDEX

Data description: Producer Price Index (PPI) is published as average annual index starting from 2009-2019 (2010=100) based on the Nomenclature of Economic Activities (NACE- rev 2). Indices are presented in the form of table and graph. Calculation of Producer price index in economic activities, was done using Laspeyer formula.

Due to the comparability of data with Eurostat, with the decision of the Government of the Republic of Kosovo, the Kosovo Agency of Statistics, since 01/09/2014, began using the new nomenclature of economic activities (NACE Rev. 2) based on the "Regulation No.11/2013 on the implementation of standards for classification of activities" so that the Producer Price Index has changed in accordance with this nomenclature. At the same time based index has changed, moving from base year 2007=100 in base year 2010=100.

Definitions:

Prices for calculating producer price index are collected with individual questionnaires for each article on quarterly basis in the entire territory of Republic of Kosovo, which was carried out by the staff of KAS regional departments.

Data source:

Prices for calculating the producer price index are collected from most representative production companies for economic activities, which are spread throughout the country. Weights for calculating producer price index are updated every year with the data of Tax Administration of Kosovo (TAK) in combination with the Structural Business Survey (SBS) carried out by KAS.

FIG 21.4: AVERAGE ANNUAL PRODUCTION INDICES BY YEARS 2007-2020 (2010=100)

CHAPTER 22. ENVIRONMENTAL STATISTICS

MUNICIPAL WASTE

Data description: Municipal waste survey carried according to DPSIR model, which is adopted by the OECD member states, Eurostat, European Environmental Agency (EEA) and also based on the register of environmental indicators according to EEA.

Definitions:

Municipal waste survey is being conducted in KAS since 2007. The MWS is conducted as regular annual survey.

The purpose of this survey is to provide reliable statistical data for municipal waste sector in Kosovo.

The objective of the municipal waste survey is to provide statistical data, municipal waste generation and municipal waste processing.

Data source: Surveyed public and private companies involved in municipal waste management.

INDUSTRIAL WASTE

Data description: Reporting units are all companies with 10 or more workers. Companies involved are classified by NACE Rev. 2 sectors of the following activities:

1. *B - Mining and quarrying*
2. *C - Manufacturing*
3. *D - Supply of electricity, gas, steam and air conditioning*
4. *E - Water supply, sewerage, waste management and land adjustment*
5. *F - Construction*
6. *G-U - Service sectors*

The purpose of industrial waste survey is to provide data on the waste generated by the industry. The data were collected for two categories: generated waste and processed waste.

Definitions:

Industrial waste survey in Kosovo was carried out according to NACE Rev.1.1, which is also statistical classification of economic activities. Waste is classified as hazardous and non-hazardous, based on the waste catalogue.

Statistical instruments used during this research are in compliance with the Regulation (EC) No 2150/2002 of the European Parliament and of the Council of 25 November 2002 on waste statistics, European Waste Catalogue and Law on Waste in Kosovo (No. 02/L-30) drafted according to European Union Regulations.

The objective of IWS is to conduct a survey on industrial waste for NACE groups according to sectors B, C, D, E, F, G-U.

Data sources: Industrial enterprises classified under NACE Rev. 2 in the following activity sectors: Mining and quarrying, manufacturing, supplying electricity, gas, steam and air conditioning and water supply, sewerage, waste management and land revitalization activities, construction and service sectors.

¹⁾ Since 2010, the amount of municipal waste per capita is calculated based on the data of Census 2011 (2010 preliminary data, while for 2011, final data). The high growth of municipal waste per capita by the year 2009-2010 is due mainly influenced by data on the lowest number of population since 2011.

²⁾ Comment: Data for 2015 are missing due to non-reporting of classified waste from door to door and collective dwelling.
