Foreword

Kosovo Agency of Statistics (KAS), respectively the Department of Agriculture and Environmental Statistics has prepared the publication of Economic Accounts for Agriculture. The publication includes data of the Economic Accounts for Agriculture for 2023.

The main data sources for the compilation of Economic Accounts for Agriculture are the two surveys carried out by the Kosovo Agency of Statistics: Agricultural Households Survey (AHS) and Statistics of Agricultural Prices (SAP). Other sources of data are: administrative data from the Ministry of Agriculture, Forestry and Rural Development and Kosovo Food and Veterinary Agency. Due to the lack of data sources for particular articles, expert assessments are used.

The compilation of the Economic Accounts for Agriculture in KAS started in 2010 and the findings were published for the period 2005-2022. Data are compiled according to the methodology set by Eurostat: Manual on the economic accounts for Agriculture and Forestry EAA/EAF 97 (Rev.1.1) and Commission Regulation (EC) No. 306/2005.

Economic Accounts for Agriculture (EAA) are the satellite accounts of the European System of Integrated Economic Accounts (ESA). They have been published by the Statistical Office of the European Communities (Eurostat) since 1964. Although the basic concepts and estimation rules are identical to those determined in ESA, the specific characteristics and requirements in agriculture have also been taken into account at EAA.

Economic Accounts for Agriculture (EAA) are based on Regulation (EC) No.138/2004 of the European Parliament and of the Council of 5 December 2003 on Economic Accounts for Agriculture in the Community.

Kosovo Agency of Statistics thanks the Swedish International Development Cooperation Agency (SIDA) for its support in building the agromonetary statistics system. KAS is particularly grateful to Swedish experts on Economic Accounts for Agriculture and Agriculture Statistics, Mrs. Ann-Marie Karlsson, Mr. Tomas Eriksson, Mr. Daniel Persson, Mr. Jimmie Enhall, Mr. Ulf Svensson, Mrs. Emma Wixe, and others who directly or indirectly assisted in finalizing this publication.

Publication was prepared by:

Bajrush Qevani - Director of Department of Agriculture and Environment Statistics

Violeta Arifi Gashi - Head of Division for Agriculture Statistics

Luljeta Krasniqi-Çela - Officer for Economic Accounts for Agriculture

Prishtina, August 2024

Acting Chief Executive Officer, KAS

Methodological Explanations

Economic Accounts for Agriculture (EAA) are the satellite accounts of the European System of Integrated Economic Accounts (ESA), an accounting system that follows the recommendations of the UN for national accounts. They cover agricultural products and services produced during the accounting period that have been sold by agricultural units or kept in farm stocks or are used for further processing by agricultural producers.

EAA aims to highlight economic development in the national agricultural sector and can be used as a basis for assessing agricultural sector changes in the agricultural sector.

Economic Accounting concepts for Agriculture are adapted to the particular nature of agricultural production: for example, Agricultural Accounts for Agriculture include not only the production of grapes and olives, but also the production of wine and olive oil from agricultural producers as well as information related to the consumption of crop products used in animal feed. EAA data can be used to calculate indicators of income for the agricultural sector.

Economic Accounts for Agriculture report production values and expenditures, both by producer prices and basic prices.

Economic Accounts for Agriculture with basic prices include direct payments (subsidies), which are not included in the Economic Accounts for Agriculture at producer prices. Moreover, direct payments are divided into direct payments related to the product, respectively the output. Direct producer-related payments, such as the environmental, are reported under a separate item.

Definitions and explanations

EAA includes:

+ The value of crop output
 + The value of animal output
 + Income from agricultural services
 = Total agricultural output

- Intermediate consumption
 = Gross value added
 - Consumption of fixed capital
 = Net value added

+ Other subsidies on production
 = Income factor

- Employee compensation
 = Net operating surplus

- Rent
 - Interest
 = Net entrepreneurial income

Net operating surplus estimates land yield, capital and unpaid work. It is the balance of income generation, which shows the distribution of income between the factors of production and the general government sector. Net value added and net operating surplus are calculated for industries.

The net added value of primary agricultural production measures the value created by all agricultural units after the consumption of fixed capital.

The gross added value of primary agricultural production measures the outputs. This is the difference between the output value and the intermediate consumption value.

The Kosovo Agency of Statistics, specifically the Department of Agriculture and Environment Statistics in 2023 has changed the base year for the Agricultural Production and Input Price Index from 2015 = 100 to 2020 = 100. This adjustment aligns with Eurostat's methodology. For calculating the Economic Accounts in Agriculture for 2020 – 2023, indices with the new base year 2020 = 100 have been used.

Economic Accounts for Agriculture (EAA), 2023

Graph 1 indicates total crop and animal output in 2023 (value at current prices).

Crop output has decreased by -11,6%% in 2023 compared to 2022. The decrease in the value of crop output can be explained by the decrease in cereals, fodder plants, vegetables and garden produce..

Animal output has increased by 19,3% in 2022 compared to 2023. The increase can be explained by the increase in the value of animal output. Hence, total crop and animal output decreased by -1,6% in 2023 compared to 2022.

Graph 1: Crop and animal output in million euro, 2023

Graph 2: Distribution of agricultural crop in total crop output, 2023

Graph 2 indicates the average distribution of agricultural crops in total crop output in 2023. Crop output includes: cereals, industrial crops, fodder crop, vegetables and garden output, potatoes and fruit. Vegetables and garden products are the most important category and account for about 24,1% of total crop production, followed by fruit with 23.3%. Cereals make up 22.1% of the total plant production, fodder plants with 20.8% and potatoes with 9.1%, while other categories have a smaller percentage of their share.

Graph 3: Structure of animal and animal output in total animal output, 2023

Graph 3 indicates the structure of animal and animal output in total livestock output in 2023. Livestock output include: milk, eggs, honey and raw wool.

Milk is the most important livestock output; in 2023 it contributes with 133,3 out of a total of 176,9 million euros in livestock output. Milk has increased by 11,9% in 2023 compared to 2022.

The category of animals mainly includes the sale of meat from cattle, pigs, sheep, goats, poultry and other animals.

Graph 4: Structure of animals by species, 2023

Graph 4 indicates the structure of animals by species in 2023. Graph indicates that sales of beef are the most important with 40,7%, followed by followed by sheep and goat meat by 17,9%, poultry 17,7%, then pork 13,1%, as well as meat from other animals with 10,6%.

Graph 5: Crop output, animal output and agricultural services in million euro, 2023

Graph 5 indicates the participation of crop output, animal output and agricultural services in total agricultural output in 2023 in million euro.

Graph 6: Total intermediate consumption for the period 2022-2023

Graph 6 indicates the total intermediate consumption for the period of 2022-2023.

Total intermediate consumption is estimated at around 348,4 million euros in 2023, which represents an decrease of -11,7% compared to 2022.

Graph 7: Intermediate consumption structure, 2023

Graph 7 indicates the structure of intermediate consumption in 2023. Animal feed accounts for more than half of the intermediate consumption, about 46,4%. Animal feed includes the food that the farmer buys from other farmers or raw materials and the animal feed that the farmer produces on the farm itself. Fertilizers and soil improvers account for about 16,2% of total intermediate consumption, other goods and services by 9,0%, energy expenditures account for 8,3%, agricultural services 6,0% while other categories have a lower share in the structure of intermediate consumption.

The Graph below indicates the various expenditures made on agricultural holdings during the agricultural year. The most important category in 2023 is intermediate consumption, which accounts for about 68,9%, followed by consumption of fixed capital, at 28,3%, while other categories have a smaller percentage of their share.

Graph 8: Inputs in agriculture by category, 2023

Gross value added is defined as the difference between total output from agricultural industry and intermediate consumption. Gross value added reached 657,9 million euros in 2023, which is an increase by 5,9%, compared to 2022.

Net value added is defined as total output from the agricultural industry, minus intermediate consumption expenditures and consumption of fixed capital. Net value added reached 515,0 million euros in 2023, which is increased by 6,6%, compared to 2022.

Entrepreneurial income is defined as the amount of net value added, plus subsidies on production, minus compensation for employees, taxes on production, rents and interest on loans. Entrepreneurial income has increased by 6,6% in 2023, compared to 2022.

Kosovo Agency of Statistics: short description

Kosovo Agency of Statistics is a professional institution which deals with collection, processing and publication of official statistical data. As such acts since 1948 and has passed through several historical stages, structured according to state regulation of those times.

On 2 August 1999, the Agency has resumed his professional work (after nine years of interruption of all statistical series detrimental to the interest of Kosovo), as an independent institution under the Ministry of Public Administration. Since 12.12.2011 the Agency operates in the frames of the Prime Minister's Office. Office is funded by the Kosovo Consolidated Budget, but also by donors for specific projects and for technical professional support.

Kosovo Agency of Statistics acts according to the Law No. 04/L-036 which entered into force on 12.12.2011 and Amendment of Law No. 06/L-058 which entered into force on 17.01.2019. Programme of Official Statistics 2018/2022 is in implementation for the development of statistical system in correlation with the European Union statistics (EUROSTAT).

Kosovo Agency of Statistics has this organizational structure: **production departments**; Department of Economic statistics, Department of National Accounts, Department of Agriculture and Environment statistics and Department of Social statistics. **Support Departments**; Department of Methodology and Information Technology, Department of Policy Planning, Coordination and Communication, Department of Census and survey and Department of Administration. **Within the Agency are also established Regional Offices**; Gjakove, Gjilan, Mitrovica, Peja, Prizren, Pristina and Ferizaj.

In KAS are employed in total 156 workers, of whom 115 at the headquarters of the Agency, while in the Regional Offices, 41. Agency's educational qualifying structure is as follows: 123 with university education, 15 with non-tertiary education, and 18 with secondary education.

We have professional and technical cooperation with all Ministries of the Government of Kosovo, especially with the Ministry of Economy and Finance, Central Bank of Kosovo, with international institutions, EUROSTAT, International Monetary Fund, World Bank, Sweden's SIDA, DFID, UNFPA, UNDP, UNICEF, and with the statistical institutions of the countries in the region.

Kosovo Agency of Statistics almost completely covers the territory of Kosovo, based on the statistical structure of the enumeration areas as the basic unit and sole in the country from which it gets first-hand information. All surveys conducted in the field use the extension of the samples in these enumeration areas but also a statistical methodology according to international recommendations. During the collection of statistical data and reports from reporting entities are involved professionals, technicians, administrators, servants of the country offices, field enumerators from regional offices, etc.

In 2011, the project of Population Census, Households and Dwellings was successfully implemented, and in 2014 was successfully carried out the Agriculture Census. The result obtained from these censuses will have an important role in the development policies.

The mission of the Agency; to meet the needs of users with qualitative statistical data, objective, in time and space so that users have reliable base to conduct regular analysis in the interest of planning and project development at the municipal and country level. To support government institutions, scientific institutes, research academies, businesses in order to provide proper information for decision-makers and other users in Kosovo.
